THE publication of this volume has been considerably delayed, in the hope of procuring the census of the United States complete. But after waiting above three months, the return from Tennessee is still wanting; and it being absolutely uncertain when it will be received, the publisher is induced to withhold the work no longer.

In the present edition, the Maps have been very considerably improved. The chief roads throughout the United States are laid down—and nearly seven hundred places added, none of which were in the former edition.

A small difference will be perceived between the tables of the population of the United States, in pages 112 and 113. This has arisen from the deficiency of a return from a small district in the State of New York, at the time the former table was printed—but which was received seasonably for the other.

Philadelphia, October 8, 1801.

N. B. Those places in *Italics*, are the seats of government, or the towns in which the state legislatures commonly hold their sessions.

Lakes. The United States partly embosom some of the largest lakes in the world. They may properly be called inland seas of fresh water.

Wood lake, the most northwestern in the United States, is said to be seventy miles long from east to west, and in some places forty miles wide. This lake is the communication, by means of the grand carrying place, with lake Superior.

Rainy or long Lake, is east of the above, and is nearly one hundred miles long, and at its greatest width twenty miles.

Lake Superior, or the Upper Lake, is the largest on the continent of America, being about one thousand five hundred miles in circuit. The water is pure and transparent, and appears to lie on a huge bed of rocks. There are many islands in this lake, some of them large, particularly Isle Royal, which is one hundred miles long, and, in some places, forty miles wide. On the south side of this lake is a remarkable cape with many points, called cape Chegomagan.

About one hundred miles west of this, is a considerable river, remarkable for the abundance of virgin copper found on its banks. Storms affect this lake nearly as much as the Atlantic Ocean; the waves running very high, and the navigation being dangerous. It discharges its waters from the southeast corner, through the river or straits of St. Mary, which is about forty miles long, in which there is a considerable fall.

Lake Huron receives its waters generally from Lake Superior, through the above straits; is next in magnitude to Lake Superior. Its circumference is about one thousand miles. On the north side is an Island called Manitaulin, more than eighty miles long. On the south-west side is Thunder Bay, so named from the frequency of thunder heard there. At the northwest corner of this lake, and about forty miles from the River St. Mary, it communicates with Lake Michigan, by the straits of Michilimackinac. This lake is about three hundred miles long, from north to south, and seventy broad.

Lake St. Clair lies about midway in the communication, between lakes Huron and Erie, and is about ninety miles in circumference.

Lake Erie receives its waters through the river or strait Detroit. This lake is nearly three hundred miles in length, from east to west, and about forty in the broadest part. A point of land, called Long Point, projects on the north side into this lake, and extends several miles towards the southeast.

The west end of the lake is intersected with a number of islands, much infested with venomous snakes, making it dangerous to land on them. Lake Erie communicates at its northeast end, by the River Niagara, (that runs nearly north, and in which about the middle of this River, are the celebrated Falls of Niagara, or Och Niaghra, which signifies wonderful) with

Lake Ontario, of nearly an oval form. Its greatest length is from southeast to northeast, and its circumference about six hundred miles. Its banks in many places are steep. It receives the waters of some considerable rivers, the principal of which are the Geneseo, and the Onondago; this last is supplied by a number of lakes and rivers, watering a beautiful and luxuriant fertile soil. On the northeast this lake discharges itself into the River Cataraqui, or St. Laurence.

Lake Champlain is the next in size to Ontario, and lies north east from it. It is about eighty miles in length from north to south; and of various breadths, the greatest not being eighteen miles, and has many islands, the largest of which is called Hero.

Lake George communicates to the above at the south, thirty-six miles long, and from one to seven broad. There is a multitude of islands in this lake, most of which are little more than rock. The water of this lake is about one hundred feet above the level of lake Champlain.

There are many other Lakes or Ponds, of inferior note, among which are Memphremagog, Winnipissiogee, Umbagog, Oneida, &c. &c.

Rivers. The Mississippi receives the waters of many very considerable rivers, and their branches, rapidly conveying them down to the Gulf of Mexico, through vast forests and meadows, in an almost innumerable number of meanders. From the Ohio to New Orleans, which, in a direct line, does not exceed four hundred and sixty miles; the direction of the channel is so very crooked, as to make it about eight hundred and sixty by water. A great number of Islands, some of great extent, are interspersed throughout this vast river.

Its source has never yet been ascertained; but it is supposed to be upwards of three thousand miles from the sea, following its windings. From nearly opposite the Illinois River, the western bank of the Mississippi is generally higher than the eastern. From Mine-a-fer to the Iberville, the eastern bank is the highest.

The Ohio is a most beautiful river. Its current is gentle, its waters clear, smooth, and unbroken by rocks and rapids, except at one place, at Louisville, where they descend about ten feet, in the length of a mile and an half. From Fort Pitt, to its mouth, is eleven hundred and eighty-eight miles, as measured according to its various turnings.

The Illinois is a large navigable river, running a very serpentine course about S.W. through extensive, rich and fertile lands; it empties into the Mississippi one hundred and seventy-six miles above the Ohio; its source is within a few miles of the south side of Lake Michigan, to which there is a small portage, by means of Chicago River. The lands on the banks of this river, and to the Wabash, are as fertile as any part of the United States; and are emphatically stiled "the Garden of America."

The Wabash is a beautiful navigable river ; it interlocks with the Miami of the Lakes, where it has a portage of a few miles, and the Great Miami. A silver mine has been discovered on the northern bank of the Wabash, above Ouatinon. A copper mine also on this river, has, perhaps, the richest vein of this metal, in the whole earth.

This River empties into the Ohio about one thousand and twenty miles below Pittsburg.

There is a number of other considerable Rivers, for a particular description of which, see the respective States to which they belong.

Swamps. The most remarkable swamps are *Ouaquaphenogaw* or *Ekanfanoka*, nearly 300 miles in circumference, in the state of Georgia, which is the source of the River St. Mary's, part of the southern boundary line ; the two *Dismals* in North Carolina, of great extent, each containing a large lake in its centre ; the *Great* and *Buffaloe* swamps, in the north western parts of Pennsylvania ; and the *Tonewanto* in the Genessee country, in the N. W. part of the State of New York.

Mountains. The principal mountains in the United States are, *Agamenticus*, in Maine; the *White Mountains*, and *Monadnor*, in New Hampshire ; *Wachusett*, in Massachusetts ; the *Green Mountains*, in Vermont ; and the long range of mountains, made up of a number of ridges and spurs, under various names, stretching from N. E. to S. W. between the Atlantic Ocean, on one side, and the lakes and Mississippi river, on the other, and collectively called *The Allegany Mountains*, about 900 miles in length, and from 150 to 250 in breadth.

Face of the Country. Generally speaking, the territory of the United States is agreeably variegated with plains and mountains, vales and hills. New England is an uneven, hilly, and rocky country. A broad space, including all the branches of the *Allegany Mountains*, commencing at Hudson's river in New York, and extending circuitously south westerly through all the states westward and southward, (Delaware excepted) is mountainous. These are not confusedly scattered, or rising in a variety of high peaks, but extend in continued uniform ridges, towards the south, where some terminate in very high bluffs ; others gradually subsiding into the level country of Georgia, from whence issue the rivers which run into the Gulf of Mexico. Eastward of these mountains, quite to

the sea coast, a border of from 60 to 100 miles, and sometimes more, in breadth, is a remarkably level country, and in the southern states free from stone. West of this range of mountains, is a fine, and charmingly diversified country, well watered, fertile, temperate, and peopling with unexampled rapidity.

Soil and Vegetable Productions. Every species of soil that the earth affords may be found in the United States; and all the various kinds of fruits, grain, pulse, and garden plants and roots which are found in Europe; besides a great variety of native vegetable productions. Tobacco, rice, indigo, wheat, Indian corn, cotton, rye, oats, barley, buck-wheat, flax, and hemp, are among the principal productions of the United States.

Animals. The territory of the United States contains about one fourth of the number of species of quadruped animals in the known world. Some of them are common to North America, and the European and Atlantic parts of the eastern continent; others are peculiar to this country.

The wild animals in this country are not, in general, of so savage a nature, as those of the same kind in Europe.

Birds. No less than 271 species of Birds have been found and described as inhabitants of the United States. They generally exceed those of Europe in the beauty of their plumage, but are much inferior to them in the melody of their notes.

Government. The United States constitute what may, with strict propriety, be called a REPUBLIC. It consists of sixteen separate, independent states, having governors, constitutions and laws of their own, united under one general, federal constitution of government, administered by an elective head, and by a proportionate number of Representatives of the people from all the States.

Commerce. The merchants of this country carry on an extensive foreign trade with Russia, Sweden, Denmark, Hamburg, United Netherlands, Great Britain, Austrian Netherlands and Germany, France, Spain, Portugal and Italy, in Europe, with Morocco and several other parts of Africa, with China, and various Asiatic countries, and the East India Islands, with the West Indies, South America, and the N. W. coast of North America. The principal articles exported are fish, lumber, live stock, beef, pork, flour, wheat, Indian corn, tobacco, rice, indigo, flax seed, pot and pearl ashes, iron, &c.

Manufactures. Several important branches of manufactures have grown up and flourished in the United States, with a rapidity which surprises; affording an encouraging assurance of success in future attempts. Of these the following are the most considerable, viz. Of *Skins*—tanned and tawed leathers, dressed skins, shoes, boots and slippers, harness and saddlery of all kinds, port-manteaus and trunks, leather breeches, gloves, muffs and tippets, parchment and glue. Of *Iron*—bar and sheet iron, steel, nail rods and nails, implements of husbandry, stoves, pots and other household utensils, the steel and iron work for carriages, and for ship building, anchors, scale beams and weights, and various tools of artificers; arms of different kinds. Of *Wood*—ships, cabinet wares and turnery, wool and cotton cards, and other machinery for manufactures and husbandry, mathematical instruments, coopers' wares of every kind. Of *Flax* and *Hemp*—cables, sail-cloth, cordage, twine and pack-thread. Of *Clay*—bricks and coarse tiles, and potters' wares.—Ardent spirits and malt liquors. Writing and printing paper, sheathing and wrapping paper, pasteboards, fullers' or press papers, and paper hangings. Books. Hats of fur and wool, and mixtures of both. Women's stuff and silk shoes. Refined sugars. Chocolate. Oil of animals and seeds, soap, spermaceti and tallow candles; copper and brass wares, particularly utensils for distillers, sugar refiners, and brewers; andirons and other articles for household use; clocks, philosophical apparatus; tin wares of almost all kinds for ordinary use; carriages of all kinds; snuff, chewing and smoking tobacco; starch and hair powder; lampblack and other painters' colours; gunpowder, &c.

Besides the manufactures of these articles, which are carried on as regular trades, and have attained to a considerable degree of maturity, there is a vast scene of household manufacturing, which contributes very largely to the supply of the community.

Revenue and Expenditures. The revenue of the United States arising from duties on various articles, amounted, in the year 1799, to 13,478,581 dollars 93 cents. The expenditure for the same year amounted to 11,795,537 dolls. 42 cents; leaving a balance in favour of the United States of 1,683,044 dollars and 51 cents.

Debt. At the close of the year 1799, the debt of the United States stood as follows, viz.

Domestic debt	68,584,820 30
Foreign Debt	10,819,000
	<hr/>
Total	79,403,820 30

Military Strength. The military strength of this country lies in a well disciplined militia of about 800,000 brave and independent freemen, and an army of about 3 or 4000 men to defend the frontiers of the union, and to man the several fortresses in different parts of the United States.

Religion. The inhabitants of the United States, some few Jews, and numerous Deists excepted, profess themselves to be of the Christian religion, under various denominations, as Congregationalists, which are the most numerous sect in New England; Presbyterians, which are the most numerous in the middle and southern states; Episcopalians, Catholics, Dutch Reformed, Friends, Baptists, Methodists, German Lutherans and Calvinists, Moravians, Unitarians, Universalists, and Shakers. The Constitution of the United States, in an especial manner, provides against the establishment of any particular form of religious worship; or, the prohibiting the free exercise of every man's religious tenets: all are left at liberty to follow their own mode of salvation, without molestation.

History. The territory of the United States was originally inhabited wholly by numerous tribes of Indians. It was discovered by the English as early as 1497, but no permanent settlement was made by them in any part of it till about the year 1610, when a colony was established at James town in Virginia, under the direction of Lord Delaware.

These colonists, having migrated from Great Britain, considered themselves as British subjects, and as such, for a long course of years, cheerfully fought the battles, and submitted to the laws and government of Great Britain. By repeated acts of oppression, which commenced in the year 1765, and by turning a deaf ear to their petitions and remonstrances, Great Britain, at length, lost the affections and the confidence of her colonies, and a cruel and unnatural war commenced between them at Lexing-

ton, about ten miles northwest of Boston, on the 19th of April 1775. On the 4th of July, 1776, the Congress, who were then sitting in Philadelphia, declared the Thirteen United colonies, which they represented, to be free, sovereign and independent States. They had before this appointed GEORGE WASHINGTON, Esq. to the command of the American army.

In 1778, a treaty of alliance was entered into between France and the United States, which hastened the termination of the war, and the establishment of our independence.

It was not, however, till the year 1783, that the war was concluded, and peace established. The history of this war has already been written by Dr. Gordon and Dr. Ramsay in America.

It can now only be observed, that Great Britain expended nearly 100 millions of sterling money, and lost 100,000 men, and won nothing but disgrace. America endured every difficulty and hardship from her inveterate and powerful enemy; lost many lives and much treasure, but gloriously delivered herself from a foreign dominion, and obliged her imperious foe to yield to her *arms*, what she would not grant to her *petitions*.

In consequence of the weakness and defects of the general government, which was formed during the tumult of war, a new *Federal Constitution* was formed at Philadelphia, in 1787, by delegates from the several States, and on the 3d of March, 1789, it was organized by the first Congress, in the city of New York. George Washington, by the unanimous voice of the people, was placed at the head of the new government, and John Adams, next to him in office.

NEW ENGLAND,

COMPREHENDING

THE NORTHERN OR EASTERN STATES,

Viz. VERMONT, NEW HAMPSHIRE, MAINE, MASSACHUSETTS,
RHODE ISLAND AND CONNECTICUT.

SITUATION AND BOUNDARIES.

New England is bounded north, by Lower Canada ; east, by the Province of New Brunswick, and the Atlantic Ocean ; south, by the same ocean, and Long Island Sound ; west, by the state of New York. It lies in the form of a quarter of a circle.

Climate and Diseases. New England has a very healthful climate, which is evinced from the great ages of the inhabitants. It is estimated that about one in seven of the inhabitants live to the age of 70 years ; and about one in thirteen or fourteen to 80 years and upwards.

The pulmonary consumption is the most destructive disorder, and is commonly the effect of exposures to cold and rainy weather, &c. The intermittent fever or ague, is seldom seen within thirty or forty miles of the sea coast. Inflammatory fevers prevail in the winter months ; both men and women suffer from not adopting sufficiently warm clothing.

Winter commonly commences, in its severity, about the middle of December ; sometimes earlier, and sometimes not till Christmas. Cattle are fed or housed, in the northern parts of New England, from about the 20th of

November, to the 20th of May ; in the southern parts not quite so long.

Face of the Country, Mountains, &c. New England is a high, hilly, and, in some parts, a mountainous country, formed by nature to be inhabited by a hardy race of free, independent republicans. The mountains are comparatively small, running nearly north and south, in ridges parallel to each other.

There are three principal ranges of mountains passing nearly from southwest to northeast, through New England. One of them runs between Connecticut and Hudson's rivers : another on the east side of Connecticut river : a third range begins near Stonington in Connecticut. These ranges of mountains are full of springs of water, that give rise to numberless streams of various sizes, which, interlocking each other in every direction, and falling over the rocks in romantic cascades, flow meandering into the rivers below.

On the sea coast, the land is low, and in many parts level and sandy. In the vallies between the forementioned ranges of mountains, the land is broken and in many places rocky, but of a strong rich soil.

Rivers. The principal rivers in New England are, Penobscot, Kennebeck, Androscoggin or Ameriscoggin, Saco, (pronounced *Sawco*) Merrimack, Connecticut, Housatonic, and Onion Rivers ; besides many smaller ones.

Productions. New England, generally speaking, is better adapted for grazing than for grain, though a sufficient quantity of the latter is raised for home consumption, if we except wheat, which is imported in considerable quantities from the middle and southern states. Indian corn, rye, oats, barley, buck wheat, flax and hemp, generally succeed very well. Wheat is cultivated to advantage in many parts of the interior country, but on the sea coast it is subject to blast. Apples are common, and, in general, plenty in New England ; and cider constitutes the principal drink of the inhabitants. Peaches do not thrive so well as formerly. The other common fruits are more or less cultivated in different parts.

New England is a fine grazing country ; the vallies between the hills, are generally intersected with brooks of water, the banks of which are lined with a tract of rich meadow or intervale land. The high and rocky ground is, in many parts, covered with clover, and generally af-

fords the finest of pasture. It will not be a matter of wonder, therefore, that New England boasts of raising some of the finest cattle in the world. Butter and cheese are made for exportation; considerable attention has been paid to raising sheep and mules.

Population and Character. New England is the most populous part of the United States. It contained according to the census of 1790, 1,009,522 souls. The great body of these are landholders and cultivators of the soil. As they possess in fee simple, the farms which they cultivate, they are naturally all attached to their country; the cultivation of the soil makes them robust and healthy, and enables them to defend it.

New England may, with propriety, be called a nursery of men, whence are annually transplanted, into other parts of the United States, thousands of its natives. Vast numbers of them, since the war, have migrated into the northern parts of New York, into Kentucky, the north Western Territory, and into Georgia; and some are scattered into every state, and every town of note in the union.

The New Englanders are generally tall, stout and well built. Their education, laws and independent situation, serve to inspire them with high notions of liberty.—Many of the women are handsome, have generally fair and healthful countenances, mingled with softness and delicacy. They are genteel, easy and agreeable in their manner, and sprightly and sensible in conversation; not neglecting the management of domestic concerns, which they perform with neatness and economy.

In New England, education is more generally attended to among all ranks of people than in any other part of the globe; arising from the excellent establishment of schools in almost every township.

In these schools, which are generally supported by a public tax, and under the direction of a school committee, are taught the elements of reading, writing and arithmetic; and in the more wealthy towns, they are beginning to introduce the higher branches, viz. grammar, geography, &c.

History. The first company that came to New England, planted themselves at Plymouth. They were a part of the Rev. Mr. Robinson's congregation, which, for twelve years before, had lived in Holland, for the sake of

enjoying liberty of conscience. They came over in the year 1620.

Before they landed, having on their knees devoutly given thanks to God for their safe arrival, they formed themselves into a body politic, by a *solemn contract*, to which they all subscribed, thereby making it the basis of their government. They chose Mr. John Carver, a gentleman of piety and approved abilities, to be their governor for the first year. This was on Nov. 11, 1620.

Their next object was to fix on a convenient place for settlement. In doing this they were obliged to encounter numerous difficulties, and to suffer incredible hardships. Many of them were sick in consequence of the fatigues of a long voyage; their provisions were bad; the season was uncommonly cold; the Indians, though afterwards friendly, were now hostile; and they were unacquainted with the coast. These difficulties they surmounted, and on the 31st of December they were all safely landed at a place, which they called *Plymouth*. This is the first English town that was settled in New England.

The whole company that landed consisted of but 101 souls. Their situation was distressing, and their prospect truly dismal and discouraging. Their nearest neighbours, except the natives, were a French settlement at Port Royal, and one of the English at Virginia. The nearest of these was 500 miles from them, and utterly incapable of affording them relief in a time of famine or danger. Wherever they turned their eyes, distress was before them. But they bore their hardships with unexampled patience, and persevered in their pilgrimage of almost unparalleled trials, with such resignation and calmness, as gave proof of great piety and unconquerable virtue.

In 1643, the four colonies of Plymouth, Massachusetts, Connecticut, and New Haven, agreed upon articles of confederation, whereby a congress was formed, consisting of two commissioners from each colony, who were chosen annually, and when met were considered as the representatives of "The United Colonies of New England." The powers delegated to the commissioners were much the same as those vested in Congress by the articles of confederation, agreed upon by the United States in 1778.

VERMONT.

Breadth	96				1°. 44' and 3°. 37' E. long.

Boundaries. Bounded north, by Lower Canada; east, by New Hampshire, from which it is separated by Connecticut river; south, by Massachusetts; west, by New York.

Civil Divisions. Vermont is divided into the following counties, viz. Bennington, Rutland, Addison, Chittenden, Orange, Windsor, and Windham.

New Counties organized in 1796: Franklin, Orleans, Caledonia and Essex.

These lie along the Canada line, and made a part of the counties of Orange and Chittenden.

These counties are divided into 230 towns or townships, most of which are incorporated with the privileges usually annexed to the towns in New England.

Lakes and Rivers. Few parts of the world are better watered than this state. Perennial fountains rise on almost every farm. Streams descend from the mountains in various directions, which, uniting, form many rivers of various magnitudes, that fertilize the lands through which they pass, and furnish an abundant supply of seats for mills and founderies. There are twelve rivers which fall into Connecticut river from the east side of the mountain—three run north of the lake Memphramagog—eight (several of them of considerable magnitude and

Continued.

length) empty into Lake Champlain, from the west side of the mountain, and two fall into Hudson's river.

Lake Champlain, more than half of which lies in this state, is about twelve miles in breadth in the widest place.

Memphramagog lies partly in this state and partly in Lower Canada, the line crossing it about seven miles from its southern shore. This lake communicates with the River St. Laurence, by the St. Francis.

Willoughby Lake, in Greensborough, and Leicester Lake in Salisbury, are of less note ; but afford abundance of excellent large fish.

Connecticut river forms the eastern boundary of Vermont, and has its source in the height of land which divides the waters of St. Laurence, and those falling into the Atlantic. For about 120 miles from its rise, its course is nearly S. W. and thence nearly south, until it empties in Long Island sound, traversing an extent of about 400 miles. Loaded boats ascend to the foot of the fifteen miles falls, five miles above Newbury ; about 220 miles from the sea. Throughout this distance are many rapids and falls, which may be amended by means of locks and canals, for which purpose companies in the adjoining states are formed.

Mountains and Face of the Country. Vermont is divided from north to south by a high chain of mountains, called Green mountains, or Ver Mons (which give name to the State). The southern extremity is called West Rock, about three miles from Newhaven in Connecticut. From the Massachusetts line, more than eighty miles to the north, the mountains are from twenty to thirty miles from Connecticut river. The west range is, in general, by far the highest. There is a number of other mountains in this state, some of them very high, with rich valleys intervening, of the most luxuriant soil.

Climate. The earth is generally covered with snow from the middle of December to the middle of March, and in some high lands, to the depth of four or five feet. Since the country has been cleared, the winters are milder, Vegetation advances in the spring with great rapidity.

Soil and Productions. This state is generally hilly, and some parts mountainous, but not rocky. Its soil is of all the various kinds, and adapted to wheat, rye, corn, bar-

ley, oats, peas, flax, hemp, and all sorts of eatable roots. It is a fine grass country, and the inhabitants raise, and send to Boston and New York markets, some of the finest beeves in the United States. They make butter and cheese also of a good kind, and in considerable quantities.

Minerals. Iron and lead ores of several kinds, pipe clay, which has been wrought into durable crucibles, and quarries of white, grey, and variegated marble, have been found in different parts of this state. About 1,200 tons of iron are annually manufactured.

Trade and Manufactures. The trade of this state is principally to Boston, Hartford and New York: to which places the inhabitants export horses, beef, pork, butter, cheese, wheat flour, iron, nails, pot and pearl ashes.

The principal articles manufactured in this state, are, iron, maple sugar, corn spirits, beer, and the domestic manufactures of clothing.

Literature. A charter for a richly endowed university was granted by the legislature of this state in 1791, to be established at Burlington; and liberal and permanent provision is made for the support of schools, throughout the state. Thirty-three thousand acres of land have been reserved, in the several grants made by this state, for the use of the university. And in about one hundred of the townships of the state, a right of land, averaging about 330 acres, is reserved for the support of grammar schools; and in every town a right for town schools. These funds will increase in value as the state populates. In no country is common education more attended to.

Curiosities. There are several remarkable caves, particularly in the towns of Clarendon and Dorset; and some curious chasms in the beds of Onion and Poultney rivers. From appearances, some have conjectured that Connecticut river has lowered its channel from eighty to an hundred feet perpendicular, throughout the whole length of this state. In sinking a well in Burlington, on Onion river, a number of frogs, in a torpid state, were found bedded in the earth twenty-five feet below its surface; and a log of timber forty-nine feet, in the same well.

Chief Towns. Windsor on the east, and Rutland on the west side of the mountain, both nearly in the centre of the settled parts of the state, from north to south, are, according to an act of the legislature, to be alternately the seat of government. Both are flourishing towns.

Bennington, situated near the south west corner of the state, is the largest, and one of the oldest towns in the state, containing a house for public worship, a court house and jail. A memorable battle was fought near its neighbourhood, in 1777, between brigadier general Starke, at the head of 800 undisciplined militia, and a detachment of general Burgoyne's army. Newbury is the shire town of Orange county: It has a court house, which stands on the high ground back of the town, and commands a fine view of the Ox-bow, a curious bend in the river: also a very elegant meeting house for Congregationalists.

In the town of Orwell is Mount Independence, at the southern extremity of lake Champlain. The western bank of Connecticut river is lined by a large number of pleasant, thriving towns. There are various towns on the rivers and lake Champlain west of the mountains.

Constitution. By the constitution of this state, formed and ratified in December, 1777, the legislative power is vested in a house of representatives of the freemen of the state, annually chosen: and the executive power, in a governor, lieutenant-governor, and twelve counsellors, chosen also annually by the freemen. Every seven years a council of thirteen censors is to be chosen by the freemen to revise and correct the laws and conduct of the legislature, and, if thought necessary, to call a convention for the revision of the constitution.

History. The south part of the territory of Vermont was formerly claimed by Massachusetts. As early as the year 1718, that government had granted forty-nine thousand acres, comprehending part of the present towns of Brattleborough, Fulton, and Putney, as an equivalent to the colony of Connecticut, for some lands which had been granted by Massachusetts within the limits of the Connecticut charter. In the year 1725, the government of Massachusetts erected a fort in the town of Brattleborough. Around this fort were begun the first settlements within the present limits of Vermont. On a final settlement of a dispute between Massachusetts and New Hampshire, the present jurisdictional line between Vermont and Massachusetts, was run and established, in the year 1741. From that time until the year 1764, this territory was considered as lying within the jurisdiction of New Hampshire. During this period, numerous grants were made; and, after the year 1760, some considerable settlements were

begun under the authority of that province. In the year 1764, by order of the king of England, this territory was annexed to the province of New York. The government of that province pretended to claim the right of soil as well as jurisdiction, and held the grants formerly made under New Hampshire to be void. This occasioned a long series of altercation between the settlers and claimants under New Hampshire and the government of New York, and which, at the commencement of the late revolution, terminated in the establishment of a separate jurisdiction in the present state of Vermont. A particular detail of this controversy would be unentertaining. It is sufficient to observe, that on the 17th day of October, 1790, the dispute was finally compromised, by commissioners appointed by the States of New York and Vermont; and the claims of New York, both to jurisdiction and property, extinguished, in consideration of the sum of thirty thousand dollars to be paid by the state of Vermont to that of New York; and on the 4th of March, 1791, Vermont was admitted a member of the federal union. In the late war, between Britain and the United States, the inhabitants of this territory took a very early and active part. Immediately on the news of the battle of Lexington, a company of volunteers, under the late general Ethan Allen, attacked and took the British garrisons of Crown Point and Ticonderoga. A regiment was commissioned by Congress, and continued in service under the command of the late colonel Warner. Other troops were raised and constantly kept in service by the convention of New Hampshire grants, and afterwards by the state of Vermont. The spirit of these troops, and the militia of the grants, in the battle of Hubbardton and Bennington, in the year 1777; and the assistance which they afforded in the capture of Burgoyne, is well known to the public. General Burgoyne, in a letter to the British ministry, written at Saratoga, makes the following observation: "The inhabitants of the New Hampshire grants, a territory unpeopled and almost unknown in the last war, now pour forth by thousands, and hang like dark clouds on my left."

The history of Vermont has been well written by Samuel Williams, L.L.D. and published in 1794.

NEW HAMPSHIRE.

SITUATION AND EXTENT:

	Miles.	
Length	168	Between { 42° 41' & 45° . 15' N. lat. 2° . 45' & 4° . 33' E. long.
Greatest Breadth	90	
Least Breadth	19	

Boundaries. New Hampshire is bounded on the north, by Lower Canada; east, by the District of Maine, and the Atlantic Ocean, on which it extends the distance of about eighteen miles; south, by Massachusetts; and west, by Vermont, from which it is separated by Connecticut river.

Civil Divisions. This state is divided into five counties, viz. Rockingham, Stafford, Hillsborough, Cheshire and Grafton.

Rivers and Lakes. Connecticut, Androscoggin, Saco, Piscataqua, and Merrimack rivers, receive a great part of their waters, and the two latter have a great part of their courses, in this state.

Connecticut river is settled nearly to its source, extending along the western side of this state, about 170 miles.

Merrimack receives the united waters of Pemigewasset and Winnipissiogee rivers: the former is very rapid, and rises from a white mountain, west of the white hills.

The Piscataqua is the only large river, whose whole course is in this state; rising in a pond, in the N. E. corner of the township of Wakefield, coursing in a S. S. E. direction, to the sea.

Winnipissiogee lake is the largest collection of water in New Hampshire. Its length is 24 miles, and it is from

3 to 12 miles in breadth, and full of islands. The other considerable lakes and ponds are Umbagog, Squam, Sunnapee, and Great Ossapy.

Mountains and Face of the Country. The shore of this state is mostly a sandy beach of about 18 miles in extent, adjoining which are salt marshes, intersected by creeks. No remarkable highlands appear, till you arrive about twenty or thirty miles from the sea, when you pass over, towards the westward, several extensive ridges of mountains, till you come to Connecticut river, bordering on which, are extensive meadows or *intervalles*, as they are called, rich and well watered.

The principal mountains are the White Mountains, the highest in this state or in New England. In clear weather, they are discovered before any other land, by vessels coming in to the eastern coast; but from the white appearance they make, are frequently mistaken for clouds. They are visible on the land eighty miles distant, on the S. and S. E. sides. On the N. W. side, at Dartmouth, seven summits are seen at one view, of which four are bald, the highest of which has been named Mount Washington. Besides those are Monadnock, Ossapy, Sunnapee, and Moosehillock, so named from the circumstance of its being a remarkable range for moose.

Soil and Productions. The low intervalle lands upon the banks of the rivers, being frequently overflowed, are very rich, and produce abundant crops of wheat and other grain. The wide spreading hills are generally much esteemed, as warm and rich; and such as are rocky and moist, afford good pasture.

Agriculture is the chief business of the inhabitants of this state. Beef, pork, mutton, poultry, wheat, rye, Indian corn, barley, pulse, butter, cheese, flax, hops, esculent plants, and roots, fruits, of the several kinds common in New England, are produced in great abundance in New Hampshire.

Trade and Manufactures. The inhabitants, according to their local situation, trade at Boston, Portsmouth, Portland, Hartford, and New York. Lumber, fish, oil, flaxseed, beef, pork, pot and pearl ashes, butter, and cheese, constitute the principal articles of export. The amount of exports, in the year ending Sept. 30th, 1795, was nearly 230,000 dollars, and in 1799, was 361,000 dollars. The tonnage in 1798 was 19,220 tons.

The country people generally manufacture their own clothing, and considerable quantities of tow cloth, for exportation. The other articles manufactured are, pot and pearl ashes, maple sugar, bricks, pottery, and some iron.

Population and Character. It appears from pretty accurate documents, that the inhabitants of this state have doubled in number in nineteen years, seven of which were years of war. In 1767, the inhabitants were estimated at 52,700 : in 1790, at 141,885. Instances of remarkable longevity are common in New Hampshire. Robert Macklin, a native of Scotland, died here in 1787, at the age of 115. He frequently walked from Portsmouth to Boston, 66 miles in one day, and back again the next. He performed this journey the last time, when he was 80 years old.

The inhabitants of New Hampshire, like all settlers in new countries, are in general, a hardy, robust, active, brave people.

Literature. There is a flourishing and liberally endowed College, called *Dartmouth College*, at Hanover, on Connecticut river, founded by Doctor Eleazer Wheelock; and four Academies, in a prosperous state, one of which, at Exeter, has a fund of 50,000 dollars, the donation of one man, the Hon. John Phillips, L. L. D. of Exeter.

Chief Towns. Portsmouth, on Piscataqua river, is the largest town in this state, and its only seaport. Its harbour is one of the finest on the continent, having depth of water sufficient for the largest vessels, and is defended against storms, by the adjacent land, so that ships may ride secure, in any season. Nature has so well fortified it, that little is required by art, to render it impregnable.—Exeter, fifteen miles S. W. of it, at the head of navigation, on Swanscot river, a pleasant town, and next in size, is well situated for a manufacturing town. Concord, on the west bank of Merrimack river, fifty-four miles westward of Portsmouth, is a flourishing town, and commonly the seat of government. Dover, Amherst, Keene, Charleston, Plymouth, and Haverhill, are the other most considerable towns in this state.

Curiosities. In the township of Chester is a circular eminence called Rattlesnake Hill. On the S. side, is a cave called the *Devil's den*. It is a dreary cold place. In

the town of Durham is a large Rock, so equally poised on another, as to be easily moved with the finger.

Religion. The principal denominations of Christians in this state are Congregationalists, who are by far the most numerous, Presbyterians, Episcopalians, Baptists, and Friends or Quakers.

Government. Not materially different from that of Massachusetts.

History. The first settlement made in this state by the English, was in the year 1623. For many years the colony was under the jurisdiction of Massachusetts, but had a separate legislature. In every stage of the opposition made to the encroachment of the British Parliament, the people, who ever retained a high sense of liberty, cheerfully bore their part. They flew eagerly to the American standard, when the voice of their country declared for war, and their troops had a large share of the hazard and fatigue, as well as of the glory, of accomplishing the Revolution.

This state, at present, is increasing very rapidly in numbers, wealth and respectability. Its resources for the support of government are such as will, with prudent management, effectually preclude the necessity of heavy public taxes. The state is progressing, with circumspection, in a liberal policy, and is, in general, in a more flourishing situation, than at any former period.

The history of this state has been written and published in three volumes, by the Rev. Jeremy Belknap, D. D. of Boston.

DISTRICT OF MAINE.

[BELONGING TO MASSACHUSETTS.]

SITUATION AND EXTENT:

	Miles.	
Length	240	} Between { 43°. and 48°. N. lat. 4°. and 7°. 36' E. lon.
Breadth	377	

Boundaries. Bounded, north, by Lower Canada, from which it is separated by the high lands; east, by the river St. Croix, and a line drawn due north from its source to the said high lands, which divides it from the Province of New Brunswick; south, by the Atlantic Ocean; west, by New Hampshire.

Divisions. The District of Maine is divided into six counties, viz. York, Cumberland, Lincoln, Kennebeck, Hancock, and Washington.

Face of the Country, Soil and Climate. The District of Maine, though an elevated tract of country, cannot be called mountainous. A great proportion of the lands are arable and exceedingly fertile, particularly between Penobscot and Kennebeck rivers. On some parts of the sea-coast, the lands are but indifferent; but this defect might easily be remedied, by manuring it with a marine vegetable, called rock-weed. It makes a most excellent manure, and the supply is immense.

The climate does not materially differ from the rest of New England. The weather is more regular in the winter, which usually lasts with severity from the middle of December to the last of March; during this time the ponds

and fresh water rivers are passable on the ice, and sleighing continues, uninterrupted by thaws.

Rivers. The principal are the following, as you proceed from east to west : St. Croix, a short river, remarkable only for its being part of the western boundary of the United States, Passamaquoddy, Schoodiac, Union, Penobscot, Kennebeck, Sheepscut, Ameriscoggin, now most generally called Androscoggin, Steven's river, Cussen's river, Royal's river, Presumscut, Nonesuch, Saco, and Mousom. York and Cape Neddock rivers, in the county of York, are short and inconsiderable streams.

Bays. The principal bays are Passamaquoddy, Machias, Penobscot, Casco and Wells. Of these, Penobscot, and Casco are the most remarkable. Both are full of islands, some of which are large enough for townships.

Productions. The soil of this country in general, where it is properly fitted to receive the seed, appears to be very friendly to the growth of wheat, rye, barley, oats, peas, hemp, flax, as well as for the production of almost all kinds of culinary roots and plants, and for English grass ; and also for Indian corn, provided the seed be procured from a more northern climate. Hops are the spontaneous growth of the country.

This country is equally good for grazing as for tillage, and large stocks of neat cattle may be fed, both summer and winter.

The natural growth of this country consists of white pine and spruce trees in large quantities, suitable for masts, boards and shingles ; the white pine is, perhaps, of all others the most useful and important ; no wood would supply its place in building. Maple, beech, white and grey oak, and yellow birch, are the growth of this country. The birch is a large sightly tree, and is used for cabinet work, and receives a polish little inferior to mahogany. The low lands produce fir. This tree is fit neither for timber nor fuel ; but it yields a balsam that is highly prized. This balsam is contained in small protuberances like blisters, under the smooth bark of the tree. The fir is an evergreen, resembling the spruce, but very tapering, and neither tall nor large.

From the different rivers, in this eastern country, waters may be drawn for mills and all other water work.

Great advantages arise, to those who live on the sea-coast, from the shell fish, viz. the lobster, the scollop and

the clam. To these advantages may be added, those which arise from the forests being filled with the moose and deer, and the waters being covered with wild fowl of different kinds.

Exports. This country abounds with white pine boards, ship timber, and every species of split lumber, manufactured from pine and oak; dried fish furnishes a capital article of export.

State of Literature. The erection of a college, near Casco Bay, is contemplated, and a charter granted by the legislature. Academies in Hallowell, Berwick, Fryeburg and Machias, have been incorporated by the legislature, and endowed with handsome grants of the public lands. Another at Portland has been instituted, but has not yet been endowed. And it is but just to observe, that a spirit of improvement is increasing.

Chief Towns. Portland is the capital of the District of Maine. It is situated on a promontory in Casco Bay, and was formerly a part of Falmouth. It has a most excellent, safe, and capacious harbour, which is seldom or never completely frozen over. The inhabitants carry on a considerable foreign trade. It is one of the most thriving commercial towns in the Commonwealth of Massachusetts.

York is seventy-four miles N. E. from Boston, and nine from Portsmouth. York river, which is navigable for vessels of 250 tons, six or seven miles from the sea, passes through the town. Over this river, about a mile from the sea, a wooden bridge was built in 1761, two hundred and seventy feet long, exclusive of the wharves at each end, which reach to the channel, and twenty-five feet wide. The bridge stands on thirteen piers.

Hallowell is a very flourishing town, situated at the head of the tide waters on Kennebeck river. Pownallborough, Penobscot and Machias are also towns of considerable and increasing importance. Bangor, situated at the head of the tide waters on Penobscot river, Kittery, Wells, Berwick, North Yarmouth, Bath, Waldoborough, &c. are other considerable towns.

Character and Religion. There are no peculiar features in the character of the people of this district, to distinguish them from their neighbours in New Hampshire and Vermont. Placed as they are in like circumstances, they are

like them, a brave, hardy, enterprising, industrious, hospitable people.

The prevailing religious denominations are Congregationalists, and Baptists; there are a few Episcopalians, Roman Catholics, and Quakers or Friends.

History. The first attempt to settle this country was made in 1607 on the west side of Kennebeck, near the sea. No permanent settlement, however, was, at this time, effected. It does not appear that any further attempts were made, until between the years 1620 and 1630.

MASSACHUSETTS.

SITUATION AND EXTENT:

	Miles.		
Greatest Length	155	} Between	{ 1°. 42' & 5°. 2' E. L. 41°. 32' & 42°. 52' N. L.
Greatest Breadth	90		

Boundaries. Bounded north, by Vermont and New Hampshire ; east, by the Atlantic Ocean ; south, by the Atlantic, Rhode Island and Connecticut ; west, by New York.

Divisions. This part of Massachusetts is divided into twelve counties, viz. Suffolk, Norfolk, Essex, Middlesex, Hampshire, Plymouth, Bristol, Barnstable, Duke's, Nantucket, Worcester and Berkshire.

Climate. See New England.

Rivers. Housatonick river rises from several sources in the western part of this state, and flows southerly through Connecticut, into Long Island Sound. Deerfield river falls into Connecticut river, from the west, between Deerfield and Greenfield. Westfield river empties into the Connecticut at West Springfield. Connecticut river passes through this state, and intersects the county of Hampshire. In its course it runs over falls, above Greenfield, and between Northampton and Springfield. Miller's and Chicapee rivers fall into Connecticut on the east side ; the former at Northfield, the latter at Springfield.

In the north eastern part of this state is Merrimack river. It is navigable for vessels of burden about 20 miles from its mouth. There are twelve ferries across this river in the county of Essex.

Nashua, Concord, and Shawsheen rivers, rise in this state, and run a north easterly course into the Merrimack. Parkes's river takes its rise in Rowley. Ipswich and Chebacco rivers pass through the town of Ipswich into Ipswich bay. Mystic river falls into Boston harbour east of the peninsula of Charlestown, and is navigable three miles, to Medford. A canal is cutting to connect this with Merrimack river.

Charles river is a considerable stream which passes into Boston harbour, between Charlestown and Boston. It is navigable for boats to Watertown, 7 miles.

Neponset river, after passing over falls sufficient to carry mills, unites with other small streams, until it meets the tide in Milton, from whence it is navigable for vessels of 150 tons burden to the bay, distant about four miles.

North river runs in a serpentine course between Scituate and Marshfield, and passes to the sea. Taunton river is made up of several streams which unite in or near the town of Bridgewater.

Capes, Bays, Islands, &c. Cape Ann is on the north side of Massachusetts Bay, and Cape Cod on the south. Cape Malabar, or Sandy Point, extends ten miles from Chatham towards Nantucket; Cape Poge, the N. E. point of Chabaquiddick; Gayhead, the west point of Martha's Vineyard.

The principal bays are Ipswich, Boston, Plymouth, Cape Cod or Barnstable, and Buzzard's. Many Islands are scattered along the coast.

Nantucket Island is fifteen miles long, and eleven broad; it lies south of Cape Cod. It contains 23,000 acres, including the beach. The island itself constitutes one county, by the name of Nantucket. It has but one town, called Sherburne. The inhabitants of this island are principally quakers; there is one society of Congregationalists.

Martha's Vineyard, which lies a little to the westward of Nantucket, is nineteen miles in length, and four in breadth. It contains three societies of Congregationalists, two of Baptists, and three of Indians. This and the neighbouring island of Chabaquiddick, No-man's land, and the Elizabeth Islands, which contain about 16,500 acres of valuable land, constitute Duke's county.

Castle island is about three miles from Boston, and contains about eighteen acres of land. The buildings are

the governor's house, a magazine, jail, barracks, and workshops. The fort of this island commands the entrance of the harbour. Here are mounted fifty pieces of cannon, and forty-four others lie dismounted.

Light Houses. On Plumb Island near Newbury, are two. On Thatcher's Island off Cape Ann, two lights. On the north side of the entrance of Boston harbour, on a rock, one single light. On the north point of Plymouth harbour, two lights. At the entrance of the harbour, on Nantucket, one single light.

Soil and Productions. In Massachusetts are to be found all the varieties of soil from very good to very bad, capable of yielding all the different productions common to the climate, such as Indian corn, rye, wheat, barley, oats, hemp, flax, hops, potatoes, field beans and peas—apples, pears, peaches, plumbs, cherries, &c.

Commerce. This state carries on an extensive and lucrative commerce. Her ships visit almost all parts of the world. Her principal exports, of her own productions, consist of pot and pearl ashes, flax seed, whale oil, spermaceti, whalebone, candles, fish, beef, pork, cheese, butter, live stock, rum, cotton and wool cards, shoes, snuff, tobacco, household furniture, lumber, &c.

The exports in 1799 amounted to 11,521,591 dollars; the tonnage in 1798, was 215,175 tons, exclusive of the District of Maine.

The Negro trade was prohibited by law, in 1788, and there is not now a single slave belonging to any individual in the commonwealth.

Manufactures. There is a duck manufactory at Boston, from which, between 2,000 and 3,000 bolts, of forty yards each, said to be the best duck ever before seen in America, have been sold in one year. Manufactures of this kind have been begun in Salem, Haverhill and Springfield. Manufactories of cotton goods have been unsuccessfully, though patriotically attempted at Beverly, Worcester and Boston. A woollen manufactory, on an extensive scale, has been established at Byfield parish in Newbury. At Taunton, Bridgewater, Middleborough, and some other places, nails have been made in such quantities as to prevent in a great measure, the importation of them from Great Britain. In this state there are about twenty paper mills, which produce about 70,000 reams of paper annually. The principal card manufac-

tories are in Boston, in which are made, yearly, about 12,000 dozen of cotton and wool cards. Between 2,000 and 3,000 dozen cards are made at the other manufactories in different parts of the state. Shoes in large numbers are manufactured at Lynn—silk and thread lace, woollen cloth, &c. at Ipswich, which, from its natural advantages, promises to become a manufacturing town—wire for cards and fish hooks, at Dedham—and a dye house has lately been built in Charlestown, for the dying of silks, woollen cloths, &c.

There are several snuff, oil, chocolate, and powder mills, in various parts of this state, and a number of iron works, and slitting mills, &c.

A glass house has been established in Boston, and promises to be of great advantage. The glass is much superior to any imported, and as cheap, according to its quality. There have been manufactured about 9000 sheets in a week.

Bridges. The bridges that merit notice in this state are the following, viz.

Charles river bridge, 1503 feet long.

Malden bridge, across Mystic river, 2420 feet long.

Essex bridge connects Salem with Beverly, 1500 feet long.

A bridge across Parker's river, 870 feet long.

A bridge over Merrimack river, in the county of Essex, about two miles above Newburyport.

Another bridge has lately been completed over this river at Pentucket falls.

Haverhill bridge, connecting Haverhill with Bradford, 650 feet long.

Merrimack bridge, between Newbury and Haverhill.

West Boston bridge, connecting the west part of Boston with Cambridge, over Charles river. These bridges are all supported by a toll.

Literary, Humane and other Societies. These institutions, in Massachusetts, exhibit a fair trait in the character of the inhabitants, viz :

The American Academy of Arts and Sciences. *The Massachusetts Charitable Society.* *The Boston Episcopal Charitable Society.* *The Massachusetts Medical Society.* *The Society for Propagating the Gospel among the Indians and others in North America.* *The Massachusetts Society for promoting Agriculture.* *The Historical Society.* *The Marine Society* of Boston, Salem, and Newburyport.

The Massachusetts Congregational Society. The Scotch and Irish Charitable Societies. A Society for the aid of Emigrants. The Massachusetts Charitable Fire Society. Boston Mechanic Association, and the Boston Dispensary for the Medical relief of the Poor.

Literature, Colleges, Academies. &c. According to the laws of this Commonwealth, every town having fifty householders or upwards, is to be provided with one or more schoolmasters, to teach children and youth to read and write, and instruct them in the English language, arithmetic, orthography and decent behaviour; and where any town has 200 families, there is also to be a grammar school set up therein, and some discreet person, well instructed in the Latin, Greek and English languages, procured to keep the same, and be suitably paid by the inhabitants. The penalty for neglect of schools, in towns of fifty families, is 10*l.* those of one hundred families, 20*l.*—of one hundred and fifty, 30*l.*

Next in importance to the grammar schools are the academies, in which, as well as in the grammar schools, young men are fitted for admission to the University.

Dummer Academy, at Newbury.

Philips' Academy, in Andover.

Leicester Academy, in the township of Leicester, and county of Worcester.

Bristol Academy, at Taunton.

Harvard College, or University, in Cambridge.

At Hingham is a well endowed school, called *Derby School*.

In Williamstown, in Berkshire county, is another literary institution.

Chief Towns. Boston is the capital, not only of Massachusetts, but of New England, and lies in lat. 42°. 23' N. It is built on a peninsula of an irregular form, at the bottom of Massachusetts Bay. The neck or isthmus which joins the peninsula to the continent, is at the south end of the town, and leads to Roxbury. The length of the town itself is not quite two miles. Its breadth is various.

At its entrance from Roxbury, it is narrow: the greatest breadth, is something more than a mile. The principal wharf extends 600 yards into the sea, and exceeds any other wharf in the United States, having large and convenient stores on the north side, its whole length.

In Boston, are 19 houses for public worship ; of which nine are for Congregationalists, three for Episcopalians, two for Baptists, one for the Friends, one for Universalists, one for Roman Catholics, one for Sandimanians, and one for Methodists.

The other public buildings are, the state house, court house, jail, Faneuil hall, an elegant theatre, an alms house, a work house, a bridewell and powder magazine. On the west side of the town is the mall, a very beautiful public walk, adorned with rows of trees.

Franklin-place, adjoining the theatre, is a great ornament to the town. It contains a monument of Dr. Franklin, and is encompassed on two sides with the tontine buildings, perhaps the most elegant of any in the United States.

A magnificent state-house has been erected.

A bridge connecting Boston with Charlestown, built on 75 piers, with a convenient draw in the middle, for the passage of vessels. It is 1503 feet long, and 43 feet wide, including a passage way on each side, of six feet wide, railed in for the convenience of people on foot.

Another bridge connecting Boston with Cambridge, is of very handsome workmanship. The wood part of it is 3500 feet long : the causeway is 3640 feet, and is the longest and probably the most expensive bridge in the United States.

The town is irregularly built ; but as it lies in a circular form around the harbor, it exhibits a handsome view, as you approach it from the sea.

On Beacon-hill (which overlooks the town from the west, commanding a fine variegated landscape) a handsome monument has been erected, commemorative of some important events of the late revolutionary war.

The market is well supplied with abundance of all the necessaries of life : the meat is equal in quality to any in the world.

The principal manufactures here are, rum, beer, paper hangings, of which 24,000 pieces are annually made, loaf sugar, cordage, cards, sail cloth, spermaceti and tallow candles, and glass. There are 30 distilleries, 2 breweries, 8 sugar houses, and 11 rope walks.

The harbour of Boston is safe, and large enough to contain 500 ships at anchor, in a good depth of water ; while the entrance is so narrow as scarcely to admit two ships abreast. It is diversified with many islands, some of which afford rich pasturing, hay and grain.

About three miles from the town is the castle, which commands the entrance of the harbour.

Salem is the second town for size, and the oldest, except Plymouth, in the Commonwealth. Here are a meeting of Quakers, an Episcopal church, and five Congregational societies. The town is situated on a peninsula, formed by two small inlets of the sea, called North and South rivers.

Southeast from Salem, and at four miles distance from it, lies Marblehead, containing one Episcopal and two Congregational churches, besides a small society of Separatists.

Newburyport, originally part of Newbury, is perhaps the most limited in its extent of land, of any township in the Commonwealth, containing but about 640 acres. Here are five houses for public worship, viz. one Episcopalian, two Presbyterian and two Congregational.

Ipswich, in the county of Essex, is divided into five parishes.

An excellent stone bridge across Ipswich river, composed of two arches, with one solid pier in the bed of the river, connects the two parts of the town.

Charlestown lies north of Boston, with which it is connected by Charles river bridge, and is the principal town in Middlesex county.

It is built on a peninsula, and very healthy. Bunker, Breed's, and Cobble (now Barrell's) hills, are celebrated in the history of the late war; and no less for the delightful prospects they afford of Boston, its variegated harbour, of Cambridge, and an extensive and highly cultivated country.

This town was destroyed by the British in 1775, previous to which, several branches of useful manufactures were carried on to great advantage. It has since revived; and its increase of houses, population, trade and navigation, have been very great within a few years past.

Cambridge and Concord are the most considerable inland towns in the county of Middlesex, the former is three and a half miles from Boston, and is a pleasant town, and the seat of the university.

The public buildings are Harvard hall, Massachusetts hall, Hollis hall, and Holden chapel. The library contains 12000 volumes. The museum has a handsome collection of natural and artificial curiosities. The part of

Cambridge, in which the colleges are situated, is pleasant and healthful, being on a large plain, about half a mile distant from the river. The latter is 18 miles N. W. of Boston, and is also a pleasant, healthy, thriving town.

Concord has been rendered famous in history, as the place where the first opposition was made to the British troops in 1775. It has a congregational church, a spacious stone gaol, and a county court house. Three handsome bridges accommodate the town.

Plymouth, the principal town in the county of the same name, and the capital of the *Old Colony*, so called, is 42 miles S. E. of Boston. This town is famous for being the first place settled by the ancestors of the New Englanders, in 1620.

Worcester, the shire town of the county of the same name, is the largest inland town in New England, and is situated about 47 miles westward of Boston.

There are in this town, two congregational churches, a court house, and a strong stone gaol.

Springfield is a very old town, and has a congregational church, a court house and a gaol : also one of the armouries of the United States is in this town, occupying a great number of buildings, and containing a vast quantity of military stores.

Military Strength. The active militia of Massachusetts is formed into 10 divisions, 21 brigades, consisting of 82 regiments of infantry, 48 troops composing 12 battalions of cavalry, and 36 companies of artillery ; together forming a well regulated body of 50,000 infantry, 2,000 cavalry, and 1,500 artillery men, with 60 pieces of field artillery.

Religion. The religion of this Commonwealth is established on a most liberal and tolerant plan. All persons of whatever religious profession or sentiments, may worship God agreeably to the dictates of their own consciences, unmolested, provided they do not disturb the peace.

The following are the several religious denominations in this state, Congregationalists, Baptists, Episcopalians, Friends or Quakers, Presbyterians, Universalists, Roman Catholics, and Methodists.

42

RHODE ISLAND AND PROVIDENCE PLANTATIONS.

SITUATION AND EXTENT.

Miles.

Length 47	}	between	{	3° 11' and 4° E. long.
Breadth 37				41° 22' and 42° N. lat.

Boundaries. Bounded north and east, by the Commonwealth of Massachusetts ; south by the Atlantic ; west, by Connecticut. Those limits comprehend what is called Rhode Island and Providence Plantations.

Divisions. This state is divided into five counties, viz. Newport, Providence, Washington, Bristol and Kent.

Bays and Islands. Narraganset Bay makes up from south to north, between the main land on the east and west. It embosoms many fertile islands, the principal of which are Rhode Island, Canonicut, Prudence, Patience, Hope, Dyer's and Hog Islands.

The harbours are Newport, Providence, Wickford, Patuxet, Warren and Bristol.

Rhode island, from which the state takes half its name, is 15 miles in length ; its average breadth is about 3 1-2 miles. It is divided into three townships, Newport, Portsmouth, and Middletown. This island, in point of soil, climate and situation, may be ranked among the finest and most charming in the world.

Travellers have named it the Eden of America. More than 30,000 sheep are fed on this island, besides neat cattle and horses.

Canonnicut Island lies 3 miles west of Rhode Island, and is seven miles in length, and about one mile in breadth. At the south end, called Beaver tail, stands the light-house.

Block Island is 21 miles S. S. W. from Newport, and is the southernmost land belonging to the state. It is a township, named New Shoreham.

Prudence Island is nearly as large as Canonnicut, lies north of it, and is a part of the township of Portsmouth.

Rivers. Providence and Taunton rivers both empty into Narraganset Bay; the former on the west, the latter on the east side of Rhode island. Providence river rises partly in Massachusetts, and is navigable as far as Providence, for ships of 900 tons, thirty miles from the sea. Taunton river is navigable for small vessels to Taunton. Fall river is small, and empties into Taunton river.

Pautuxet river is formed by two considerable streams, called the N. W. and S. W. branches, and empties into Narraganset Bay.

Patucket river, called, more northerly, Blackstone's river, empties into Seekhonk river, 4 miles N. N. E. from Providence.

Wanaspatucket river rises in Gloucester, and in its course receives many small, but never failing streams. This river, with the Moshassuck, forms Providence river, which, a few miles below the town, has the name of Narraganset bay.

Charles river rises in Wordin's pond, and in its course westward, receives Wood and Ashewague rivers, and other large supplies. A junction of this with the Shannock river, from the north, forms Paukatuck river, which, in a southerly course of about 7 miles to the sea, divides this state from Connecticut.

Climate. Rhode Island is as healthful a country as any part of America. The winters, in the maritime parts of this state, are milder than the inland country: the air being softened by a sea vapour, which also enriches the soil. The summers are delightful, especially on Rhode Island, where the extreme heats which prevail in other parts of America, are allayed by cool and refreshing breezes from the sea.

Fishes. The rivers and bays have plenty of fish, to the amount of more than seventy different kinds.

Religion. The constitution of this state admits of no

religious establishments, any further than depends upon the voluntary choice of individuals. All men professing a belief in one Supreme Being, are equally protected by the laws, and no particular sect can claim pre-eminence.

The religious denominations in Rhode Island, are the Baptists, Congregationalists, Friends or Quakers, Episcopalians, Moravians and Jews.

Literature. The literature of this state is confined principally to the towns of Newport and Providence. There are men of learning and abilities scattered through other towns, but they are rare.

The Inhabitants, in other parts of the state, pay less attention to education, than those of most other parts of New England.

At Providence, is Rhode Island College.

At Newport there is a flourishing academy, under the direction of a rector and tutors, who teach the learned languages, English grammar, geography, &c.

Societies. A marine society is established at Newport; for the purpose of relieving distressed widows and orphans of maritime brethren, and such of their society as may need assistance.—There is also,

The Providence society for promoting the abolition of slavery, for the relief of persons unlawfully held in bondage, and for improving the condition of the African race.

Mountains. In the town of Bristol is Mount Hope, or as some call it, Mont Haup, which is remarkable only for its having been the seat of the Indian king Philip, and the place where he was killed.

Tower hill, Hopkins hill, and Woonsocket hill, are very inconsiderable.

Bridges. The great bridge, in the town of Providence, formerly called Weybosset, is 160 feet long, and 22 feet wide, and unites the eastern and western parts of the town. The bridge over Patucket falls is a work of considerable magnitude. These are not toll bridges. Central and India bridges are over Seekhonk river, near its mouth, east of Providence. A bridge over Howland's ferry, uniting Rhode Island with Tiverton on the main, was unfortunately carried away by a storm.

Soil and Productions. This state produces corn, rye, barley, oats, and in some parts wheat, sufficient for home consumption; and the various kinds of grasses, fruits, and culinary roots and plants in great abundance, and in great

perfection ; cider is made for exportation. The north-western parts of the state are but thinly inhabited, and are more rocky and barren than the other parts. The tract of country lying between South Kingston, and the Connecticut line, called the Narraganset country, is excellent grazing land, and is inhabited by a number of great and wealthy farmers, who raise some of the finest neat cattle in New England, weighing from 1,600 to 1,800 weight. They keep large dairies, and make butter and cheese of the best quality, and in large quantities, for exportation.

Trade. The exports from the state are flaxseed, lumber, horses, cattle, beef, pork, fish, poultry, onions, butter, cheese, barley, grain, spirits, cotton and linen goods. The imports consist of European and West India goods, and logwood from the Bay of Honduras. Upwards of 600 vessels enter and clear annually at the different ports in this state. The amount of exports from this state to foreign countries, for one year, ending the 30th September, 1791, was 470,131 dollars and 9 cents ; in the year ending September 30, 1793, 616,416 dollars.

Manufactures. The inhabitants of this state are progressing rapidly in this branch of business. A cotton manufactory has been erected at Providence. Jeans, fustians, denims, thicksets, velvets, &c. &c. are here manufactured and sent to the southern states. Large quantities of linen and tow cloth are made in different parts of this state for exportation. But the most considerable manufactures in this state are those of iron ; such as bar and sheet iron, steel, nail rods and nails, implements of husbandry, stoves, pots and other household utensils ; the iron work of shipping, anchors, bells, cannon, &c.

Chief Towns. Newport and Providence are the two principal towns in this state. Newport lies in lat. 41°. 29' long. 71°. 17'. Its harbour, which is one of the finest in the world, spreads westward before the town. The entrance is easy and safe, and a large fleet may anchor in it, and ride in perfect security. The town lies north and south upon a gradual ascent as you proceed eastward from the water. West of the town is Goat Island, on which is a fort. There is also another fort, at Brenton's point, S. E. from Goat Island.

Newport contains houses for public worship for Baptists, Congregationalists, Episcopalians, Quakers, Moravians, and a synagogue for the Jews. The other public

buildings are a state house, and an edifice for the public library.

Providence, situated in lat. 41°. 51'. on both sides of Providence river, is 35 miles from the sea, and 30 N. by W. from Newport. It is the oldest town in this state.

Ships of almost any size sail up and down the channel.

The public buildings are an elegant meeting house for Baptists, with a lofty and beautiful steeple, and a large bell ; a meeting house for Friends or Quakers ; three for Congregationalists ; an Episcopal church, a handsome court house, in which is deposited a library for the use of the town and country—a work house, a market house, and a brick school house. This town has an extensive trade with Massachusetts, Connecticut and part of Vermont.

The houses in this town are generally built of wood, though there are some large and elegant brick buildings.

At a convenient distance from the town is an hospital.

Bristol is a pleasant thriving town, about 16 miles north of Newport, on the main. It has an Episcopal and a Congregational church.

Warren is a pleasant and flourishing town, about 3 1-2 miles N. of Bristol.

Indians. They mostly reside in the township of Charlestown, are peaceable and well disposed towards the government—they speak English.

Curiosities. About four miles northeast of Providence, lies a small village, called Patucket, a place of some trade, and famous for lamprey eels. Through this village runs Patucket river, which empties into Seekhonk river at this place. In this river is a beautiful fall of water, directly over which a bridge has been built, which divides the Commonwealth of Massachusetts from the state of Rhode Island. The fall, in its whole length, is upwards of fifty feet. The water passes through several chasms in a rock which runs diametrically across the bed of the stream, and serves as a dam to the water. Several mills have been erected upon these falls ; and the spouts and channels which have been constructed to conduct the streams to their respective wheels, and the bridge, have taken very much from the beauty and grandeur of the scene.

In the town of Middletown, about 2 miles from Newport, is a place called purgatory. It joins to the sea on the eastside of the island.

Constitution. The constitution of this state is founded on the charter granted by Charles II. in 1663 ; and the frame of the government was not essentially altered by the revolution.

History. This state was first settled from Massachusetts. Mr. Roger Williams, a minister who came over to New England in 1631, was charged with holding a variety of errors, and was on that account forced to leave his house, land, wife, and children, at Salem, in the dead of winter, and to seek a residence without the limits of Massachusetts ! Governor Winthrop advised him to pursue his course to Nehiganset, or Narraganset bay, which he did, and fixed himself at Secunk or Seekhonk, now Rehoboth. But that place being within the bounds of Plymouth colony, Governor Winslow, in a friendly manner, advised him to remove to the other side of the river, where the lands were not covered by any patent. Accordingly in 1636, Mr. Williams and four others, crossed Seekhonk river, and landed among the Indians, by whom they were hospitably received, and thus laid the foundation of a town, which from a sense of God's merciful providence to him, he called Providence.

Here he was soon after joined by a number of others, and though they were secured from the Indians by the terror of the English, yet they, for a considerable time, suffered much from fatigue and want ; but they enjoyed liberty of conscience, which has ever since been inviolably maintained in this state.

Through the whole of the late unnatural war with Great Britain, the inhabitants of this state manifested a patriotic spirit ; their troops behaved gallantly, and they are honored in having produced the second General in the field. *

CONNECTICUT.

SITUATION AND EXTENT.

Miles.

Greatest length 100 } between { 41° & $42^{\circ} 2'$ N. lat.
Greatest breadth 72 } { $1^{\circ} 50'$ & $3^{\circ} 20'$ E. L.

Boundaries. Bounded, north, by Massachusetts; east, by Rhode Island; south, by the Sound, which divides it from Long Island; west, by the state of New-York.

Civil Divisions. Connecticut is divided into eight counties, viz: Hartford, New Haven, New London, Fairfield, Windham, Litchfield, Middlesex, and Tolland.

Rivers. The principal rivers in this state are Connecticut, Housatonick, the Thames, and their branches. The former, soon after it enters the bounds of Connecticut, passes over Enfield Falls. At Windsor, it receives Windsor ferry river from the west, which is formed by the junction of Farmington and Poquabock rivers. At Hartford it meets the tide, and thence flows in a crooked channel, into Long Island Sound. It is from 80 to 100 rods wide, 130 miles from its mouth.

A bar of sand considerably obstructs the navigation at its mouth, having only 10 feet water on it, at full tides.

About 3 miles below Middleton, this river is only 40 rods in breadth, running between two high mountains. Almost every where else the banks are low, and have fine extensive meadows.

The Housatonick rises in Berkshire county in Massachusetts. It passes through a number of pleasant towns, and empties into Long Island Sound, between Milford and Stratford, which last name it bears from Naugatuk river, about 9 miles from its mouth. In this river, be-

tween Salisbury and Canaan, in the N. W. corner of this state, is a cataract, where the whole breadth of the river, which is about 150 yards, falls about 60 feet perpendicular, in one entire white sheet.

Naugatuck is a small river, and empties into the Housatonic.

The Thames enters Long Island Sound at New-London. Little river, about a mile from its mouth, has a remarkable and very romantic cataract. Across the mouth of this river is a broad, commodious bridge, in the form of a wharf, built at a great expense.

Shetucket river, the other branch of the Thames, has its source in Brimfield in Massachusetts.

Shetucket river is formed by the junction of Willamantic and Mount Hope rivers. At the mouth of Shetucket is a bridge of timber, 124 feet in length.

Paukatuck river is an inconsiderable stream, which empties into Stonington harbour.

West of Housatonic river, are a number of inconsiderable rivers, that empty into the Sound. Among these is Byram river, forming a part of the boundary between New York and this state.

Harbours. The two principal harbours are at New London and New Haven.

From the light house, which stands on the west side of the mouth of the harbour of New London, to the town, is about 3 miles. It has sufficient depth of water for large vessels, and is entirely secure one mile above the town. It is well fortified. New Haven harbour is inferior to New London.

Climate, Soil and Productions. Connecticut, though subject to the extremes of heat and cold, in their seasons, and to frequent sudden changes, is very healthful. It is generally broken land, made up of mountains, hills and vallies, and is exceedingly well watered. Some parts of it are thin and barren. Its principal productions are Indian corn, rye, wheat in many parts of the state, oats, and barley, which are heavy and good, and of late, buck-wheat—flax in large quantities—some hemp, potatoes of several kinds, pumpkins, turnips, peas, beans and fruits of all kinds which are common to the climate. The soil is very well calculated for pasturage and meadow, which enables the farmers to feed large numbers of neat cattle and horses.

Trade. The trade of Connecticut is principally with the West India Islands.

Connecticut has a large number of coasting vessels employed in carrying the produce of the state, to other states.

The exports in 1799, amounted to 1,145,818 dollars.

Manufactures. The farmers in Connecticut, and their families, are mostly clothed in plain, decent, homespun cloth. Their linens and woollens are manufactured in the family way ; and although they are generally of a coarser kind, they are of a stronger texture, and much more durable than those imported from France or England. Some of their cloths are fine and handsome.

Population and character. The state of Connecticut is laid out in small farms, from fifty to three or four hundred acres each, which are held by the farmers in fee simple ; and are generally well cultivated. This state is chequered with innumerable roads or highways crossing each other in every direction. A traveller in any of these roads, even in the most unsettled parts of the state, will seldom pass more than two or three miles without finding a house or cottage, and a farm under such improvements, as to afford the necessaries for the support of a family. The whole state resembles a well cultivated garden, which, with that degree of industry which is necessary to happiness, produces the necessaries and conveniences of life in great plenty.

The inhabitants are almost entirely of English descent. There are no Dutch, or Germans, and very few French, Scotch or Irish people, in any part of the state.

Religion. All religions, consistent with the peace of society, are unrestrained in Connecticut : and a spirit of liberality and catholicism is increasing. There are very few religious sects in this state. The major part of the people are Congregationalists. Besides these, there are Episcopalians and Baptists.

Chief Towns. There is a great number of very pleasant towns, both maritime and inland, in Connecticut. It contains five cities, incorporated with extensive jurisdiction in civil causes. Two of these, Hartford and New Haven, are capitals of the state.

Hartford (city) is situated at the head of ship navigation on the west side of Connecticut river, about fifty miles from its entrance into the Sound. It is divided by a small river, with high romantic banks. Over this river is a bridge connecting the two divisions of the city.

Its chief buildings are a state house, one church for Episcopalians, and two for Congregationalists.

New Haven (city) lies round the head of a bay, which makes up about four miles north from the Sound. Two small rivers bound the city east and west. It covers part of a large plain, which is bounded on three sides by high hills. The public buildings are a state house, college and chapel, three churches for Congregationalists, and one for Episcopalians.

New London (city) stands on the west side of the river Thames, near its entrance into the Sound. It has two places for public worship, one for Episcopalians, and one for Congregationalists. Its harbour is the best in Connecticut.

Norwich (city) stands at the head of Thames river, 14 miles north from New-London.

Middleton (city) is pleasantly situated on the western bank of Connecticut river, fifteen miles south of Hartford. It is the principal town in Middlesex county.

Four miles south of Hartford is Weathersfield, a very pleasant town, with an elegant brick church for Congregationalists.

Windsor, Farmington, Litchfield, Milford, Stratford, Fairfield, Guilford, Stamford, Windham, Suffield and Enfield, are all considerable and pleasant towns.

Colleges, Academies and Schools. In no part of the world is the education of all ranks of people more attended to than in Connecticut.

Academies have been established at Greenfield, Plainfield, Norwich, Windham, and Pomfret.

Yale college was founded in 1700, and remained at Killingworth until 1707; then at Saybrook until 1716, when it was removed and fixed at New Haven. Among its principal benefactors was governor Yale, in honor of whom, in 1718, it was named *Yale College*.

Constitution and Courts of Justice. The constitution of Connecticut is founded on the charter, which was granted by Charles II. in 1662, and on a law of the state. Contented with this form of government, the people have declined framing a new constitution since the declaration of independence.

MIDDLE STATES.

VIZ : NEW YORK, NEW JERSEY, DELAWARE, PENNSYLVANIA, and the TERRITORY N. W. OF OHIO.

SITUATION AND BOUNDARIES:

Bounded north, by Upper Canada, from which it is separated by the Lakes ; east, by the New England States ; south, by the Atlantic Ocean, Maryland, Virginia, and the Ohio river, which separates it from Kentucky ; west, by the Mississippi river.

Rivers and Bays. The principal rivers in this district are the Hudson, the Delaware, the Susquehannah, the Ohio, the Mississippi and their branches. Three bays, New York, Delaware, and part of Chesapeake, are in this district.

Climate. The climate of this grand division, lying almost in the same latitude, varies but little from that of New England. There are no two successive years alike. Even the same successive seasons and months differ from each other every year. And there is perhaps but one steady trait in the character of this climate, and that is, it is uniformly variable. The changes of weather are great, and frequently sudden.

There are seldom more than four months in the year in which the weather is agreeable without a fire. In winter, the winds generally come from the N. W. in fair, and from the N. E. in wet weather. The N. W. winds are uncommonly dry as well as cold.

The climate on the west side of the Alleghany mountains, differs materially from that on the east side, in the

temperature of the air, and the effects of the wind upon the weather, and in the quantity of rain and snow which fall every year. The S. W. winds, on the west side of the mountains, are accompanied by cold and rain. The temperature of the air is seldom so cold or so hot, by several degrees, as on the east side of the mountains.

On the whole, it appears that the climate of this division of the United States, is a compound of most of the climates in the world : it has the moisture of Ireland in spring ; the heat of Africa in summer ; the temperature of Italy in June ; the sky of Egypt in autumn ; the snow and cold of Norway, and the ice of Holland, in winter ; the tempests (in a certain degree) of the West Indies, in every season, and the variable winds and weather of Great Britain in every month in the year.

From this account of the climate of this district, it is easy to ascertain what degree of health, and what diseases prevail. As the inhabitants have the climates, so they have the acute diseases of all the countries that have been mentioned. Although it might be supposed, that with such changes and varieties in the weather, there would be connected epidemical diseases, and an unwholesome climate, yet, on the whole, this district is found to be as healthy as any part of the United States.

BRITISH TERRITORY
UPPER CANADA

NEW YORK.

NEW YORK.

SITUATION AND EXTENT:

	Miles	
Length	335	} Between { 40°. 32' & 45°. N. lat. 5°. W. & 3°. 6' E. long.*
Breadth	316	

Boundaries. Bounded south-eastwardly, by the Atlantic Ocean; east, by Connecticut, Massachusetts, and Vermont; north, by the 45th degree of N. latitude, which divides it from Canada; north-westwardly, by the river Iroquois, or St. Lawrence, and the Lake Ontario; west by Lake Erie and Niagara river; southwest and south Pennsylvania and New Jersey.

Civil Divisions. This state is divided into thirty counties, New York, Albany, Suffolk, Queens, Kings, Richmond, West Chester, Orange, Ulster, Dutchess, Columbia, Renssellaer, Washington, Clinton, Montgomery, Ontario, Herkemer, Otsego, Tyoga, Onondaga, Oneida, Steuben, Chenango, Rockland, Delaware, Greene, Cayuga, Schoharie, Essex, and Saratoga.

Rivers and Canals. Hudson's river is one of the largest in the United States. It rises in the mountainous country between the lakes Ontario and Champlain. Its whole length is about 260 miles. From Albany to lake George, is 65 miles. This distance, the river is navigable only for batteaux, and has two portages, occasioned by falls, to

* Including Long Island.

half a mile each. The tide flows a few miles above Albany, which is 160 miles from New York. It is navigable for sloops of 80 tons to Albany, and for ships to Hudson. About 40 miles below Albany, the water becomes fresh. The banks of this river, especially on the western side, as far as the highlands extend, are steep and rocky. The Overslaugh, seven miles below Albany, formed by a number of islands and sand banks, interrupts ship navigation.

Saranac river passes through Plattsburg into Lake Champlain.

Sable river, not far from the Saranac, is scarcely sixty yards wide.

The river Boquet passes through the town of Willisborough, in Clinton county.

Black river rises in the high country, near the sources of Canada Creek, which falls into Mohawk river.

Onondago river rises in the Oneida Lake.

Mohawk river passes to the northward of Fort Stanwix, and runs southwardly twenty miles, to the fort ; then eastwardly one hundred and eleven miles into the Hudson. The produce that is conveyed down this river is landed in Skenectady, and is thence carried to Albany, by land, sixteen miles, over a barren sandy plain, through which a canal is contemplated. A canal and locks round the little falls, 56 miles above Skenectady, were completed in the autumn of 1795. The perpendicular descent of these falls is forty two feet, in the length of one mile. The canal is cut almost the whole distance round them, through a hard rock.

The Cohoes falls, near the mouth of this river, are a great curiosity. The river is about one hundred yards wide ; the rock over which the water pours, extends quite across, and is about thirty feet perpendicular height. About a mile below the falls, is a most elegant and well constructed bridge, 960 feet long, 24 broad, and 15 feet above the bed of the river ; it is supported by thirteen solid stone pillars.

Delaware river rises in Lake Utstayantho, and takes its course southwest, until it crosses into Pennsylvania, thence southwardly, dividing New York from Pennsylvania, until it strikes the north west corner of New Jersey, and then passes off to the sea, through Delaware Bay, having New Jersey on the east side, and Pennsylvania and Delaware on the west.

Susquehannah E. Branch river has its source in lake Otsego. Batteaux pass to its source, thence to the Mohawk river is but twenty miles, capable of good roads.

Tyoga river rises in the Alleghany mountains, Pennsylvania; runs north into New York; thence winding to the south, enters Pennsylvania, and empties into the Susquehannah at Tyoga point. It is boatable about 50 miles.

Seneca river rises in the Seneca country, and runs eastwardly, and in its passage receives the waters of the Seneca and Cayuga lakes, and empties into the Onondago river, fourteen miles above the falls, at a place called Three Rivers. On the southside of Onondago lake, are salt springs, the water of which is salter than that of the ocean. Large quantities of salt are made here.

Chenessee or Geneseo river rises near the source of the Tyoga, and empties into Lake Ontario, 80 miles east of Niagara Fort.

The northeast branch of the Allegany river heads in the Alleghany mountains, near the source of the Tyoga, and runs directly west until it is joined by a larger branch from the southward, on the line between Pennsylvania and New York.

Niagara river, which connects Lake Ontario with Lake Erie, is about thirty miles long, and is remarkable and justly celebrated for its falls, the noblest and most extensive in the world. The whole body of water, from the upper lakes, passes over this precipice, which is about 740 yards wide, separated nearly in the middle by a rocky island of a small extent.

The water is extremely smooth, until within a short distance of the falls, when it becomes rapid, and descends with the greatest swiftness; the perpendicular pitch is said to be 150 feet; to these, if we add the descent above the falls, and the rapids below, that is, from smooth water to smooth water, the difference cannot be less than 270 feet.

These falls are opposite to Fort Schlosser about 14 miles south of Lake Ontario.

Bays and Lakes. New York Bay, nine miles long and four broad, spreads to the southward before the city of New York. South Bay, a part of Lake Champlain, lies twelve or fifteen miles north of the northern bend in Hudson's river. Lake Champlain. Oneida Lake lies about twenty miles west of Fort Stanwix; Onondaga Lake;

Lake Otsego, at the head of Susquehannah river ; Cayuga, Seneca, Canandarqua, and Chautauque Lake, the source of Connewango river, which empties into the Allegany : and several other smaller ones.

Face of the Country, Mountains, Soil and Productions. This state, to speak generally, is intersected by ridges of mountains, running in a northeast and southwest direction. Beyond the Allegany mountains, however, the country is a dead level.

The lands between the Seneca and Cayuga Lakes, are most agreeably diversified with gentle risings, and timbered with lofty trees, with little underwood.

East of the Allegany mountains, the country is broken into hills, with rich intervening vallies.

Wheat and flour are the staples of this state.

Population and Character. The annual increase, for the four years succeeding 1786, was upwards of 25,000. A great proportion of this increase consists of emigrants from the New England States.

The English language is generally spoken throughout this state ; but greatly corrupted by the Dutch dialect, which is still spoken in some counties. The manners of the people differ, as well as their language. They are industrious, neat and economical in the management of their farms and families.

Besides the Dutch and English, there are many emigrants from Scotland, Ireland, Germany and France.

Chief Towns. There are three incorporated cities in this state ; New York, Albany, and Hudson. *New York* is the capital of the state, and stands on the south west point of Manhattan, commonly called York Island, at the confluence of the Hudson and East rivers. The principal part of the city lies on the east side of the island, although the buildings extend from one river to the other. The length of the city on East River is about two miles ; and not much short of that distance on the banks of the Hudson. Its breadth, on an average, is nearly three-fourths of a mile ; and its circumference about five miles.

The houses are generally built of brick, and the roofs tiled. There are remaining a few houses built after the old Dutch manner.

The plan of the city is not regular, but laid out according to the situation of the ground. The new extended parts are laid out in parallel streets, with others crossing

at right angles. Broadway is the most convenient and agreeable part of the city, and is nearly 70 feet wide.

Upon the southwest point of the land, where the lower battery was, is now an elegant public walk, commanding a delightful view of the harbour, its islands, and the Narrows.

The most magnificent edifice in this city is *Federal Hall*, situated at the upper end of Broad street, where its front appears to great advantage. The basement story is Tuscan, and is pierced with seven openings; four massy pillars in the centre, support four Doric columns and a pediment.

The representatives' room is a spacious and elegant apartment, of an octangular form.

The senate chamber is magnificently decorated with pilasters.

The other public buildings in this city, are three places for public worship for the Dutch reformed church, four Presbyterian, three Episcopal, two Lutherans and Calvinists, one Moravian, one Roman Catholic, and one French church, and a Jews' Synagogue. Besides these, an elegant brick edifice for the use of the governor, built on the site of the old fort. The college, the gaol, and a large elegant and convenient new building, about two miles from the city, on the bank of the Hudson, for confining criminals to hard labour—The tontine building in Broadway, and the two banks, new and elegant buildings in Wall-street, not only ornament, but greatly improve the city.

Four markets in different parts of the city, are furnished with abundance of provisions of every kind, in a neat and excellent order.

The situation of the city is both healthy and pleasant. Surrounded nearly by salt water, it is refreshed with cool breezes in summer; and the air in winter is generally temperate.

The want of a plentiful supply of good water, has been obviated by the Manhattan Company, who are now incorporated; they have succeeded in having the water conveyed in pipes through the city, to the convenience of the inhabitants.

This city is esteemed the most eligible situation for commerce in the United States. It almost necessarily commands the trade of one half of New Jersey, most of that of Connecticut, part of that of Massachusetts, and

almost the whole of that of Vermont, besides its whole fertile interior country, which is penetrated by one of the largest rivers in the United States.

In point of sociability and hospitality, New York is not exceeded by any town in the United States.

Albany City, is situated upon the west side of Hudson's river, 160 miles north of the city of New York, in a most excellent situation. It stands on the bank of one of the finest rivers in the world, at the head of sloop navigation. It enjoys a salubrious air. It is the natural emporium of the increasing trade of a large extent of country west and north. No part of America affords a more eligible opening for emigrants than this. And when the contemplated locks and canals are all completed, and convenient roads opened into every part of the country, Albany will probably increase and flourish beyond almost any other city or town in the United States.

The well water in this city is very bad and unwholesome, particularly to those who are not accustomed to it.

The public buildings are, a Dutch church, one for Presbyterians, one for Germans, one for Episcopalians, a hospital, a city hall, a brick gaol, the city hotel, and a branch bank established in 1794.

The houses are mostly built in the old Dutch gothic style, with the gable end to the street; many houses have been lately built, in modern style, and improvements are constantly progressing.

Hudson City has had the most rapid growth of any place in America, except Baltimore. It is situated on the east side of Hudson's river, 130 miles north of New York, and 30 miles south of Albany. It is surrounded by an extensive and fertile back country, and, in proportion to its size and population, carries on a large trade.

The inhabitants are plentifully and conveniently supplied with excellent water, conveyed into their houses through pipes, from a fine spring about two miles from the city, at the foot of a high hill.

It stands on an eminence, from which are extensive views, variegated with woods, hills; vallies, fields and meadows, which, with the river, give a luxuriance to the eye, and are bounded by a distant chain of stupendous mountains, called the Kaats Kill, which add magnificence to the scene.

Poughkeepsie, the shire town of Dutchess county, is a pleasant little town. Lansingburg, formerly called the

New City, on the east side of the Hudson, nine miles north of Albany, and just opposite the south sprout of the Mohawk river, is a very flourishing place, and pleasantly situated on a high plain, at the foot of a hill.—Kingston, the county town of Ulster is nearly two miles west from the river, near the mouth of a little stream called Esopus. Skeneclady, sixteen miles northwest of Albany, on the south bank of the Mohawk river, is compact and regular, the houses and public buildings are built of brick, except a few, in the old Dutch style; the town is on a rich, flat, low land, surrounded with hills: the river, frequently in the spring, overflows the lands, affording a beautiful prospect about harvest time.—Troy, six miles above Albany, is a thriving place.—Plattsburg in Clinton county, situated on the west margin of Lake Champlain. This town has had a rapid progress: from being a wilderness but a few years ago, there appears now the fruits of industry, and the advantages of labour—well cultivated farms and numerous settlements have overcome almost insuperable difficulties: In this town the public buildings are, a house for public worship, a court house and a gaol.

Trade. The situation of New York, with respect to foreign markets, has decidedly the preference to any of the states. It has, at all seasons of the year, a short and easy access to the ocean. Nor have the inhabitants been unmindful of their superior local advantages, but have availed themselves of them to their full extent.

New York exported in 1799, to the amount of 18,719, 527 dollars. She had in 1798, 157,634 tons of shipping.

Medicinal Springs. The most noted springs in this state, are those of Saratoga. They are eight or nine in number, situated in the margin of the marsh, formed by a branch of Kayadarossora Creek, about twelve miles west from the confluence of Fish Creek, and Hudson's River.

New Lebanon springs are next in celebrity to those of Saratoga.

In the new town of Rensselaer, nearly opposite the city of Albany, a medicinal spring has lately been discovered, combining most of the valuable properties of the celebrated waters of Saratoga.

Colleges, Academies, &c. King's college, now called Columbia college, was, by an act of the legislature passed in the spring of 1787, put under the care of 24 gentlemen, who are a body corporate, by the name and style of "The trustees of Columbia college, in the city of New York."

The building consists of an elegant stone edifice, three stories high, with four stair cases, a chapel, hall, library, museum, anatomical theatre, &c.

Union college in the town of Skenectady.

Clinton academy, at East Hampton; Union hall academy; Erasmus hall, at Flatbush; North Salem academy; Washington academy; also the academies of Dutchess county, Hamilton, Oneida, Oxford, and Johnstown, shew the increase of learning in this state.

Literary and Humane Societies. These are not numerous, and are confined to the city of New York—viz. “The society for promoting useful knowledge.”—“The society for the manumission of slaves.” A marine society. A society for the relief of poor debtors in gaol. A manufacturing society. An agricultural society. A medicinal society; a society for the information and aid of emigrants, &c.

Religion. The various religious denominations in this state are the following: English Presbyterians, Dutch Reformed, Baptists, Episcopalians, Friends or Quakers, Roman Catholics, Jews, Shakers, and the followers of Jemima Wilkinson. The Shakers are principally settled at New Lebanon, and the followers of Jemima Wilkinson at Geneva, about twelve miles south west of the Cayuga lake.

Forts. At the point where lake George communicates with lake Champlain, is the famous post of Ticonderoga.

Crown Point is 15 miles north of Ticonderoga on lake Champlain.

West Point, on the west side of the Hudson river, about 60 miles north of the city of New York, is situated in the midst of the highlands, and strongly fortified by nature, as well as art. This has been, and is still intended to be, a grand depository of military stores belonging to the United States, and a military school.

Fort Stanwix is on the Mohawk river, 107 miles west of Skenectady. In this distance are still remains of forts Hunter, Anthony, Plain, Herkemer and Schuyler. Beyond fort Stanwix are forts Bull and Brewington on the Oneida lake. Fort Oswego is on lake Ontario, and fort Niagara at the entrance of the said lake; Fort George, at the south end of lake George; Fort Ann on Wood creek, and fort Edward on the Hudson river, near the town of Kingsbury, a few miles north of Saratoga.

The fortifications on Governor's Island, opposite the city of New York, in the bay, are intended to be a sufficient defence against any attack of an enemy by sea.

Curiosities. In the county of Montgomery is a small, rapid stream, emptying into Scroon lake, west of lake George; it runs under a hill, the base of which is 60 or 70 yards diameter, forming a most curious and beautiful arch in the rock, as white as snow.

In the township of Willsborough, in Clinton county, is a curious Split Rock. A point of a mountain, which projected about 50 yards into lake Champlain, appears to have been broken by some violent shock of nature.

Indians. The body of the Six confederated nations, viz. the Mohawks, Oneidas, Tuscaroras, Senecas, and Onondagos, inhabit in the western parts of this state. The principal part of the Mohawk tribe reside on Grand river, in Upper Canada.

Islands. There are three islands of note belonging to this state, viz. York island, Long island, and Staten island.

York island, called also Manhattan, is fifteen miles in length, and not more than one in breadth. It is joined to the main land by a small bridge on the north, called King's bridge. This island is very fertile, and well cultivated, adorned with a great many handsome seats, good farms, and pleasant small towns. The remains of intrenchments, redoubts, &c. erected during the late war, are still visible.

Long island extends 140 miles E. and terminates with Montauk Point. It is not more than ten miles in breadth, on a medium, and is separated from Connecticut by Long Island Sound. The island is divided into three counties; King's, Queen's, and Suffolk.

Hampstead plain, in Queen's county, is 16 miles long, from east to west, and 7 or 8 miles wide. East of this plain, on the middle of the island, is a barren heath, overgrown with shrubs, oaks and pines.

On Montauk Point there are no flies. The south side of the island is flat, and of a sandy soil, bordered with salt meadows towards the coast. The north side of the island is hilly, and of a strong soil.

There are few rivers in this island; the largest is Peaconok, which runs easterly and empties into a bay, containing several islands. Rockonkama pond lies in the centre of the island, and is about a mile in circumference.

Staten island lies nine miles southwest of the city of

New York, and forms Richmond county. It is about eighteen miles in length, and at a medium, six or seven in breadth. On the south side, is a considerable tract of level, good land ; but the island in general is rough, and the hills high. The eastern part of this island, and the western part of Long island, form what is called the *Narrows*, or principal entrance for ships going to New York.

Philadelphia

NEW JERSEY

American Miles

Meridian of Philadelphia

NEW JERSEY.

SITUATION AND EXTENT:

Miles.
 Length 160 } between { 39° and $41^{\circ} 20'$ N.
 Breadth 52 } { $0^{\circ} 25'$ W. and $1^{\circ} 24'$ E.

Boundaries. Bounded east, by Hudson's river and the sea; south by the sea; west, by Delaware bay and river, which divide it from the states of Delaware and Pennsylvania; and north by New York.

Civil Divisions. New Jersey is divided into 13 counties, viz. Cape May, Cumberland, Salem, Gloucester, Burlington, Hunterdon, Sussex, Bergen, Essex, Middlesex, Monmouth, Somerset and Morris.

Bays and Rivers. New Jersey is washed, on the east and southeast, by Hudson's river and the ocean; and on the west, by the bay and river Delaware.

Arthur Kull, or Newark Bay, is formed by the union of Passaic and Hackinsack rivers.

Rariton bay is at the mouth of the river, having Staten island on the north, and the main land on the south.

Barnegat Bay, on the sea coast, is in Monmouth county.

Little Egg harbour bay is to the southward of Barnegat.

The rivers in this state, though not large, are numerous. The common road from New York to Bristol, crosses three considerable rivers, viz. the Hackinsack and Passaic, between Bergen and Newark, and the Rariton by Brunswick.

Hackinsack river has its source in New York state, and runs southward, uniting with the Passaic, at the head of New-Ark bay; it is navigable about 15 miles.

Passaic is a very crooked river. It rises in a large swamp, in Morris county, west of Morris-town. It is navigable about ten miles, and is 230 yards wide at the ferry. The cataract (or Great Falls) in this river, is one of the greatest natural curiosities in the state. The river is about forty yards wide, and moves in a slow gentle current, until coming within a short distance of a deep cleft in a rock which crosses the channel, it descends and falls above 70 feet perpendicularly, in one entire sheet. The cleft is from four to twelve feet broad. The falling of the water occasions a cloud of vapour to arise, which, by floating amidst the sun beams, presents rainbows to the view, which add beauty to the tremendous scene. The new manufacturing town of Patterson is erected upon the Great Falls in this river.

The western bank of this river, between Newark and the falls, affords one of the pleasantest roads in New Jersey. The bank is high, giving an extensive view of the opposite shore, which is low and fertile.

Rariton river is formed by three considerable streams, called the north and south branches, and Millstone river ; the two former have their sources in Morris county, and the latter in Monmouth county : it passes by Brunswick, and at Amboy, forms the fine harbour called Rariton bay. It is one mile wide at its mouth, and is navigable about 16 miles. At Rariton hills, through which this river breaks, is a small romantic cascade, between two rocks.

Cohanzey river rises in Salem county, and is navigable for vessels of 100 tons to Bridgetown, twenty miles from its mouth.

Maurice or Morris river rises in Gloucester county, is navigable 15 miles for vessels of 100 tons, and 10 miles further for shallops.

Mullicus river empties in Little Egg Harbour, and is navigable 20 miles for vessels of 60 tons.

Ancocus or Rancocus river is navigable to Mount Holly, 16 miles.

That part of the state bordering on the sea, is indented with a number of small rivers, emptying into inland harbours, surrounded with swamps, and navigable for small craft.

Bridges. A neat wooden bridge 1000 feet in length, over the Hackinsack ; and another 500 feet long, over the

Passaic river, connected by a causeway near 3 miles in length, through a cedar swamp, have been erected at a great expense.

Another bridge, over the Rariton river, at New Brunswick, is about 1000 feet long, and wide enough for two carriages to pass each other, besides a foot way. The wood work rests on eleven neat stone pillars, besides the abutments. This is one of the most elegant and expensive bridges in the United States.

Face of the Country, Mountains, Soil and Productions. The counties of Sussex, Morris, and the northern part of Bergen, are mountainous.

The interior country is, in general, agreeably variegated with hills and vallies.

The southern counties, bordering on the coast, are uniformly flat and sandy. The noted hills of Navesink, and center-hill, are almost the only hills within many miles of the sea.

The highlands of Navesink are on the sea-coast, and south side of Rariton bay, in the township of Middletown, Monmouth county, near Sandy hook; this is a sandy beach or point, about 6 miles long, and one broad. On the north part stands a light-house, 100 feet high.

As much as five-eighths of most of the southern counties, or one fourth of the whole state, is almost entirely a sandy, pine barren, unfit in many parts for cultivation.

This state has all the varieties of soil from the worst to the best kind.

In the hilly and mountainous parts of the state, which are not too rocky for cultivation, the soil is of a stronger kind, and covered in its natural state with variety of woods. The land in this hilly country is good for grazing, and farmers feed great numbers of cattle for New York and Philadelphia markets.

The orchards in many parts of the state equal any in the United States, and the cider is said to be excellent.

The markets of New York and Philadelphia, receive a very considerable proportion of their supplies from the contiguous parts of New Jersey.

Trade. The trade of this state is carried on almost solely with and from those two great commercial cities, New York on one side, and Philadelphia on the other.

The exports in 1795, amounted to 130,314 dolls. and in 1799 to 9,722 dolls. only. The tonnage in 1798 was 15,424 tons.

Manufactures and Agriculture. The manufactures of this state, have hitherto been inconsiderable, not sufficient to supply its own consumption, if we except the articles of iron, nails, and leather.

The iron manufacture is, of all others, the greatest source of wealth to the state. Iron works are erected in Gloucester, Burlington, Sussex, Morris, and other counties. The Mountains in the county of Morris, give rise to a number of streams, necessary and convenient for these works, and at the same time furnish a copious supply of wood and ore of a superior quality. In this county alone, are no less than seven rich iron mines, from which might be taken ore sufficient to supply the United States; and to work it into iron, there are two furnaces, two rolling and slitting mills, and about thirty forges, containing from two to four fires each.

Although the major part of the inhabitants in this state are farmers, yet agriculture has not been improved (a few instances excepted) to that degree, which, from long experience, we might rationally expect, and which the fertility of the soil, in many places, seem to encourage.

Character, Manners and Customs. Many circumstances concur to render these various, in different parts of the state. The inhabitants are a collection of Low Dutch, Germans, English, Scotch, Irish, and New Englanders, or their descendants; and are generally industrious, peaceable, and honest—and are plain in their manners and deportment.

Religion. The inhabitants are chiefly Presbyterians. There are many Episcopalians and Quakers.

There are in this state, about 50 Presbyterian congregations, subject to the care of three Presbyteries, viz. That of New York, of New Brunswick, and Philadelphia. A part of the charge of New York and Philadelphia Presbyteries lies in New Jersey, and a part in their own respective states.

Colleges, Academies and Schools. There are two colleges in New Jersey; one at Princeton, called Nassau Hall, the other at Brunswick, called Queen's College. The latter, however, exists at present only in name.

The college at Princeton has been under the care of a succession of presidents, eminent for piety and learning; and has furnished a number of Civilians, Divines, and Physicians, of the first rank in America.

There are various good academies in this state, viz. at Freehold, Trenton, Hackinsack, Orangedale, Elizabethtown, Burlington, and at Newark. Besides these, there are grammar schools at Springfield, Morristown, Bordentown, Amboy, &c.

Chief Towns. Trenton is one of the largest towns in New Jersey, and the capital of the state. It is situated on the east side of the river Delaware, opposite the falls, nearly in the centre of the state, from north to south.

The river Delaware is not navigable above these falls, except for boats.

The public buildings are an elegant state-house, 100 feet by 50, where the legislature meet, and the courts of justice are held; the state prison, about midway between Trenton and Lambertton; an Episcopal church, one Presbyterian, one Friends, and a methodist meeting; a school house and an academy. In the neighbourhood of this pleasant town, are several gentlemen's seats, finely situated on the banks of the river.

Burlington (city) extends three miles along the Delaware, and one mile back, at right angles, into the county of Burlington, and is twenty miles above Philadelphia, by water, and seventeen by land.

The island, the most populous part, is a mile and a quarter in length, and about three quarters in breadth. It has four entrances over bridges and causeways, and a quantity of bank meadow adjoining.

There are two houses for public worship, one for the Episcopalians, and the other for Quakers, who are the most numerous. There are likewise two market houses, a court house, a gaol, and an academy.

Perth Amboy (city) stands on a neck of land at the mouth of Rariton river. Its situation is high and healthy. It lies open to Sandy Hook, and has one of the best harbours on the continent.

Brunswick (city) is situated on the southwest side of Rariton river, over which a fine bridge has lately been built, 12 miles above Amboy. Its situation is low and unpleasant, being under a high hill which rises back of the town.

Princeton is a pleasant village, 54 miles from New York, and 42 from Philadelphia. It has a college, which stands upon an elevated situation, and is a large edifice of stone, and a Presbyterian church. The situation is healthy.

Elizabethtown (borough) is fifteen miles from New-York. Its situation is pleasant, and its soil equal in fertility to any in the state.

The public buildings are, a handsome Presbyterian brick church, an Episcopal church, also of brick, and an academy. This is one of the oldest towns in the state.

Newark is seven miles from New York. It is a handsome, neat, and flourishing town, and has two Presbyterian churches, one of which is of stone, and is a large and elegant building: also an Episcopal church, a court house, a gaol, and an academy.

Bergen is the shire town of the county of the same name, 3 miles from New York; the inhabitants are Dutch, and have a stone church.

Morris-town, 19 miles N. W. of Newark, is a handsome town, and has a Baptist and a Presbyterian church, a court house and an academy.

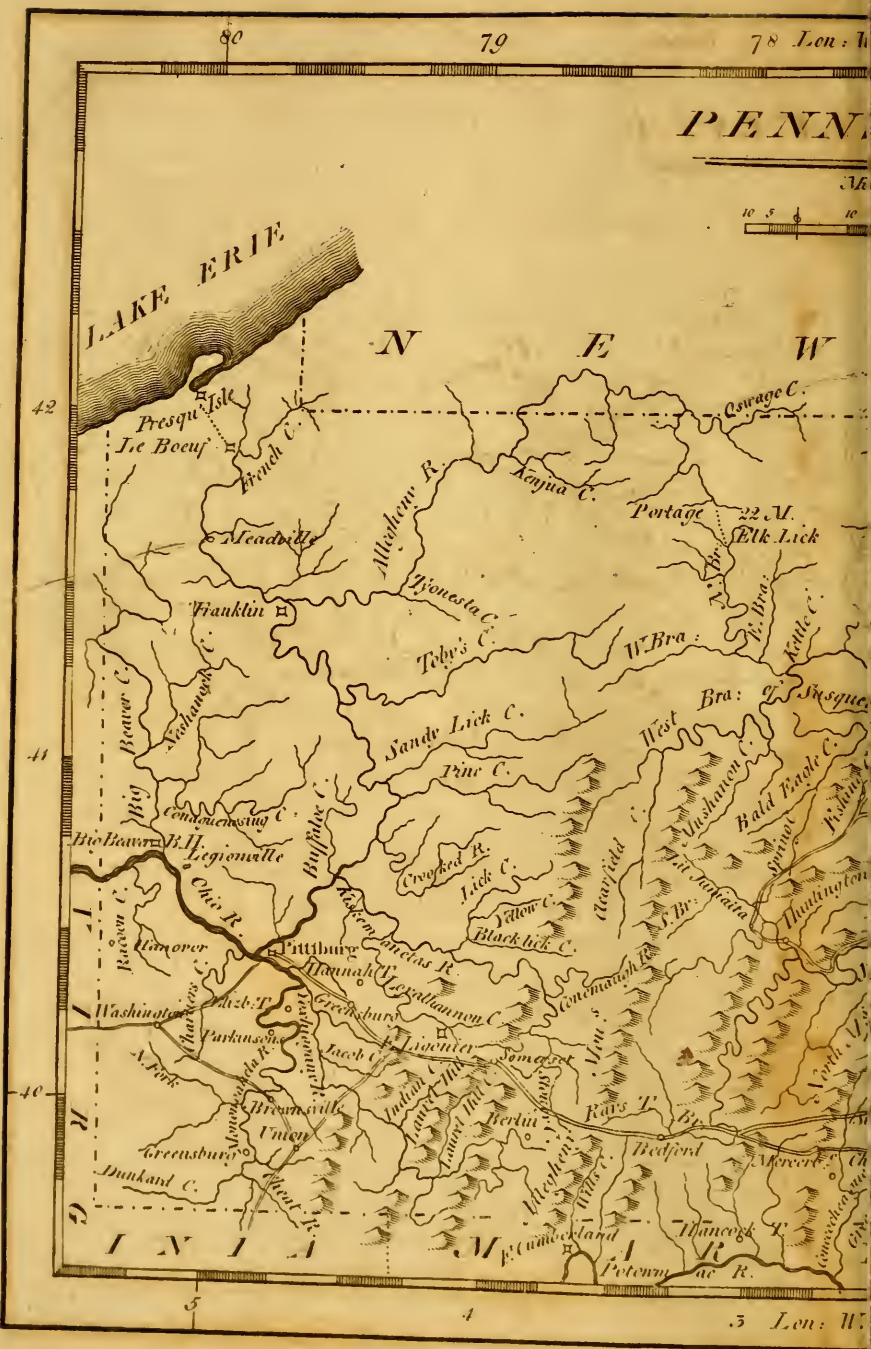

Salem is situated on a branch of Salem creek. It is an ancient town; the first Swedish settlement was within 3 miles of it. The Quakers have here their largest place of worship in New Jersey. Here is also a small well-built Episcopal church, a Baptist meeting-house, and another for Methodists, a court house and a gaol.

Constitution. The government of this state, agreeably to their constitution, is vested in a governor, legislative council, and general assembly. The governor is chosen annually, by the council and assembly jointly.

The legislative council is composed of one member from each county, chosen annually by the people. The general assembly is composed of three members from each county, chosen as above.

Length 261 } between { $0^{\circ} 20' \text{ E. \& } 5^{\circ} 20' \text{ W. lon.}$
 Breadth 161 } { $39^{\circ} 43' \text{ \& } 42^{\circ} \text{ N. lat.}$

Boundaries. Bounded east, by Delaware river, which divides it from New Jersey ; north, by New-York, and a part of Lake Erie ; west, by the north western territory, and a part of Virginia ; south, by a part of Virginia, Maryland, and Delaware.

Civil Divisions. Pennsylvania is divided into thirty-five counties, viz. Philadelphia, Chester, Delaware, Bucks, Montgomery, Lancaster, Dauphin, Berks, Northampton, Luzerne, York, Cumberland, Northumberland, Franklin, Bedford, Huntington, Mifflin, Westmoreland, Fayette, Washington, Allegany, Wayne, Somerset, Lycoming; Centre, Armstrong, Greene, Beaver, Butler, Mercer, Venango, Erie, Warren, Adams, and Crawford.

Bay and Rivers. There are six considerable rivers, which, with their numerous branches, peninsulate the state, viz. The Delaware, Schuylkill, Susquehannah, Youghiogeny, Monongahela, and Allegany. The bay and river Delaware, are navigable from the sea up to the great or lower falls at Trenton, 155 miles. The distance of Philadelphia from the sea, is about 120 miles by the ship channel of the Delaware. So far it is navigable for a 74 gun ship.

Shallops go 35 miles farther, to Trenton falls. At Easton it receives the Lehigh from the west, which is navigable 30 miles. The Delaware river is navigable for boats that carry eight tons, an hundred miles above Trenton falls ; and for Indian canoes, 150 miles.

The Schuylkill rises N. W. of the Kittatinny mountains, passing through the same, in a south east direction, and through the limits of the western part of Philadelphia, falls into the Delaware, about 6 miles below the city.

The north east branch of Susquehannah river, has its source in the lakes Otsego and Otego, in the state of New York. It receives the Tioga branch, three miles south of the boundary line, after crossing it three times. From Tioga, the Susquehannah proceeds south east to Wilkesbarre, and then southwest to Sunbury, where it unites with the west branch. About 15 miles above Harrisburg it receives the Juniata, from the northwest, proceeding from the Allegany mountains, and winding in a very serpentine manner, through a mountainous country.

The Youghiogeny river rises on the west side of the Allegany mountains. The Ohiopile falls precipitate over a level ridge of rocks, about 20 feet perpendicular height, and about eighty yards in width.

Mountains, Face of the Country, and Soil. A considerable proportion of this state may be called mountainous ; particularly the counties of Bedford, Huntingdon, Cumberland, part of Franklin, Dauphin, and part of Bucks and Northampton, through which pass, under various names, the numerous ridges and spurs, which collectively form "The Great Range of Allegany Mountains." The vales between these mountains are generally of a rich, black soil, suited to the various kinds of grain and grass. Some few of the mountains will admit of cultivation almost to their tops. The other parts of the state are generally level, or agreeably variegated with hills and vallies.

Productions, Manufactures, Agriculture, Exports, &c. We mention these different articles together, because it is difficult to separate them. The produce, manufactures, and exports of Pennsylvania are very many and various ; viz. wheat, rye, Indian corn, buckwheat, iron, gunpowder, cannon ball, iron cannon, musquets, lumber, ships, bricks, paper, &c. &c.

The exports in 1799, amounted to 12,431,967 dollars. The tonnage in 1798 was 13,824 tons.

Religion. The inhabitants are principally the descendants of the English, Irish, and Germans, with some Scotch, Welsh, Swedes, and a few Dutch. There are also many of the Irish and Germans. The Friends and Episcopalians are chiefly of English extraction, and compose about one third of the inhabitants. The Irish are mostly Presbyterians, but some are Catholics.

The Germans compose about one-quarter of the inhabitants of Pennsylvania. They consist of Lutherans, (who are the most numerous sect) Calvinists or Reformed Church, Moravians, Catholics, Mennonists, Tunkers (corruptly called Donkers) and Schwenkfelders, who are a species of Quakers. These are all distinguished for their temperance, industry and economy.

The Baptists (except the Mennonist and Tunker Baptists, who are Germans) are not numerous.

Literary, Humane, and other useful Societies. The names of these institutions are as follow: The American Philosophical Society. The College of Physicians. The Pennsylvania Hospital. The Philadelphia Dispensary. The Pennsylvania Society for promoting the abolition of Slavery. The Society of the United Brethren for propagating the gospel among the heathens. The Pennsylvania Society for the encouragement of manufactures and useful arts. Besides these, there is also a Society for alleviating the miseries of prisons—and a Humane Society for the recovering and restoring to life the bodies of persons apparently drowned—An Agricultural Society—A Society for German Emigrants—A Marine Society—A Charitable Society for the support of widows and families of Presbyterian Clergymen—A Society for the information and assistance of Emigrants—St. George's, St. Andrew's, the Welsh and the Hibernian Charitable Societies.

Colleges, Academies, and Schools. In Philadelphia is the University of Pennsylvania.

Dickinson College at Carlisle, 120 miles westward of Philadelphia, was founded in 1783. In 1787, there were 80 students belonging to this college. The number is annually increasing.

The Episcopalians have an academy at Yorktown, in York county. There are also academies at Germantown, at Pittsburg, at Washington, at Allentown and other places, endowed by donations from the legislature, and by liberal contributions of individuals.

The schools for young men and women in Bethlehem and Nazareth, under the direction of the people called Moravians, are upon the best establishment of any schools in America.

Chief Towns. The city of Philadelphia, capital of the state of Pennsylvania, lies in latitude $39^{\circ} 57'$ north, upon the western bank of the river Delaware, which is here 1362 yards in breadth. It was laid out by William Penn, in the year 1683. The ground plot is an oblong square, about one mile north and south, and two miles east and west, about five miles above the confluence of the Delaware and Schuylkill rivers. The houses for public worship are numerous, and are as follow, viz. Five for the Friends or Quakers, six for Presbyterians, three for Episcopalians, two for German Lutherans, one for German Calvinists, four for the Catholics, one of which is large and elegant, one for the Swedish Lutherans, one for the Moravians, one for the Universalists, one for the Baptists, two for Africans, who have a regularly ordained minister of their own colour, and a Jewish Synagogue. The other public buildings are, a State house and offices, two court houses, a county court house, an university, the philosophical society's hall, a medical hall, a public library, an hospital, a dispensary, an almshouse, a gaol, built of stone, the neatest and most secure building of the kind in the United States, each apartment being arched with stone, against fire and force. It is a hollow square 100 feet in front. Solitary cells have been added for the punishment of certain offences according to the new penal code. There are also, three incorporated banks, two of them very elegant buildings, two dramatic theatres, a laboratory, four brick markets, and two buildings, one an elegant though plain design, for conveying the water from Schuylkill, through wooden pipes, to various parts of the city, and at convenient places, pumps are fixed thereto, for the more effectually watering and cleansing the streets, as well as to furnish a ready supply for extinguishing fires.

The Museum, belonging to Mr. Peale, must not be omitted, containing a most valuable collection of the subjects of natural history. Its utility is constantly becoming more and more extensive, from the frequent valuable additions continually making to it.

A stone bridge is building across the Schuylkill, at the end of Market street, to consist of three arches over the

water, with strong stone piers and abutments, and open dry arches at the west end.

The environs of Philadelphia, between the two rivers, are finely cultivated, and enriched with many elegant country seats. Kensington, adjoining the city on the north, is noted for ship building. Germantown and Frankfort, in the vicinity, are populous, neat and improving villages.

The borough of Lancaster is the largest inland town in the United States, and is the seat of the State government, as well as the seat of justice for Lancaster county. It stands on the Conestoga creek, which empties into the Susquehannah, about fifteen miles above the southern boundary of the state. A new turnpike road has been made from this town to Philadelphia, distant 60 miles.

Carlisle is the seat of justice in Cumberland county, and is 120 miles west of Philadelphia. About forty years ago this spot was a wilderness, inhabited by Indians: and such is the rapid progress of civilization and industry, that it contains several hundred stone houses, three churches, a court house and an academy.

Pittsburg is beautifully situated on a large plain, between the Allegany and Monongahela rivers, 320 miles westward of Philadelphia. It is laid out in regular streets, like Philadelphia, and is the great thoroughfare from the eastern and middle states, to the settlements on the Ohio and Kentucky. The surrounding country is very hilly, but good land, and well stored with excellent coal.

Bethlehem is situated on the river Lehigh, 53 miles north of Philadelphia, a celebrated settlement of the Moravians, of the Protestant Episcopal church. The situation is healthful and pleasant. Besides the meeting house, are three large and spacious public buildings; one for the single brethren, one for the single sisters, and the others for the widows. A boarding school for young ladies is established here, and in very great repute.

Nazareth is 10 miles north from Bethlehem.

Harrisburg, on the Susquehannah, is a very flourishing place, about 100 miles westward of Philadelphia.

Forts. On Mud Island, seven miles below Philadelphia, in the river Delaware, is a citadel and fort of great strength. Presqu' Isle on the south side of lake Erie, has a commanding situation. Fort Fayette, at Pittsburg, serves as a military deposit for the western frontiers.

Constitution. The supreme executive power of the commonwealth is vested in a governor, the legislative in a general assembly, consisting of a senate and a house of representatives. The governor is chosen for three years, but cannot hold his office more than nine years in twelve. A plurality of votes makes a choice. The representatives are elected for one year; the senators for four. The latter are divided into four classes. The time of one class expires each year, whose seats are then filled by new elections. Each county chooses its representatives separately. The senators are chosen in districts formed by the legislature.

Militia. The military force of Pennsylvania consists in a well organized militia. At present there are 66,116 infantry in battalions, 18,648 in flank companies, 8,467 artillery and cavalry. Total 93,240.

History. Pennsylvania was granted by king Charles II. to Mr. William Penn, son of the famous Admiral Penn, in consideration of his father's services to the crown.

Mr. Robert Proud of Philadelphia, has published a minute and circumstantial history of this state.

SITUATION AND EXTENT:

	Miles.	
Length	92	} Between { 38°. 29' and 39°. 54' N. lat. Meri. of Phil. & 0°. 40' W. lon.
Breadth	33	

Boundaries. Bounded on the east, by Delaware river and bay, and the Atlantic Ocean; on the south and west, by the state of Maryland; north by Pennsylvania.

Civil Divisions. This state is divided into three counties, viz. Newcastle, Kent and Sussex.

Rivers and Creeks. The eastern side of the state is indented with a large number of creeks or small rivers, which generally have a short course, soft banks, numerous shoals, are skirted with very extensive marshes, and empty into the river and bay of Delaware. In the southern and western parts of this state, spring the head waters of Pokomoke, Wicomico, Nanticoke, Choptank, Chester, Sassafras, and Bohemia rivers, all falling into Chesapeak bay. Some of them are navigable twenty or thirty miles into the country for vessels of fifty or sixty tons.

Face of the Country, Soil and Productions. The state of Delaware, the upper parts of the county of Newcastle excepted, is, to speak generally, extremely low and level. Large quantities of stagnant water, at particular seasons of the year, overspreading a proportion of the land, renders it equally unfit for the purposes of agriculture, and injurious to the health of the inhabitants.

The highest ridge of the peninsula runs through this state, and is designated in Kent and Sussex counties, by a chain of swampy ground, from which the waters descend on each side.

Delaware is chiefly an agricultural state. It includes a very fertile tract of country, than which scarcely any part of the union can be selected better adapted to the different purposes of agriculture, or in which a greater variety of the most useful productions can be conveniently and plentifully reared. The soil along the Delaware river, and from eight to ten miles into the interior country, is generally a rich clay, producing large timber, and well adapted to the various purposes of agriculture. From thence to the interior and swamps, the soil is light, sandy and of an inferior quality. The general aspect of the country is very favourable for cultivation. Wheat is the staple of this state. Besides which, it generally produces plentiful crops of Indian corn, barley, rye, oats, flax, buckwheat, and potatoes. It abounds in natural and artificial meadows, containing a large variety of grasses. Hemp, cotton, and silk, if properly attended to, would doubtless flourish very well.

Chief Towns. Dover, in the county of Kent, is the seat of government. It stands on Jones's creek, a few miles from Delaware bay; and has four streets intersecting each other at right angles, forming a large square in the center, on the east side of which is an elegant state house. The town has a lively appearance. The landing is about three miles from the town.

Newcastle is 35 miles below Philadelphia, on the west bank of Delaware river. It was first settled by the Swedes, about 1627, and called Stockholm. It was afterwards taken by the Dutch, and called New Amsterdam. When it fell into the hands of the English, it was called by its present name. This is the first town that was settled on Delaware river.

Wilmington is a mile and a half west of Delaware river, between Christiana creek and the Brandywine, twenty-eight miles southward from Philadelphia. It is the largest and pleasantest town in the state: the houses are handsomely built, upon a gentle ascent of an eminence, and show to great advantage from the Delaware. On the northeast side of the town, are thirteen mills for grain, and a number of handsome dwelling houses, forming a beautiful appendage to the town. There are two Presbyterian churches, one Episcopal, one Methodist, one Baptist, and one Quakers' meeting house, a poor house, two markets, and an academy.

The heights near Wilmington afford a number of agreeable prospects.

Milford is situated near the source of a small river, 15 miles from Delaware bay, and 150 southward of Philadelphia.

Duck Creek Cross Roads, or Salisbury, is 12 miles north from Dover, and is one of the largest wheat markets in the state.

Lewes is situated a few miles west of the light house on Cape Henlopen, built principally on one street, more than three miles in length, and extending along a Creek. The situation is high, and commands a full prospect of the light house and the sea. The court house and gaol are commodious buildings. A bridge extends about a quarter of a mile from the town to the beach, over a creek and marsh.

Newport is situated on Christiana creek, three miles southwest of Wilmington.

Christiana bridge is at the head of the navigable part of the Christiana, eight miles southwest of Wilmington. It is the greatest carrying place between the waters of the Delaware and the Chesapeake.

Trade and Manufactures. Wheat is the staple commodity of this state. This is manufactured into flour, and exported in large quantities. The exports from the port of Wilmington, where a number of square rigged vessels are owned, for the year 1786, in the article of flour, were 20,783 barrels superfine, 457 ditto common, 256 ditto middlings, and 346 ditto in ship stuff. The manufacture of flour is carried to a higher degree of perfection in this state than in any other in the Union. Besides the well constructed mills on Red Clay and White Clay Creeks, and other streams in different parts of the state, there is the celebrated collection of mills on the Brandywine Creek. Here are to be seen, at one view, twelve merchant mills (besides a saw mill) which have double that number of pairs of stones, all of superior dimensions, and excellent construction. These mills are three miles from the mouth of the creek on which they stand, half a mile from Wilmington, and twenty-seven from Philadelphia, on the post road from the eastern to the southern states. They are called the Brandywine mills, from the stream on which they are erected. The quantity of wheat manufactured in these mills annually, is not accurately ascertained.

Besides wheat and flour, this state exports lumber and various other articles. The amount of the exports in 1793, were 71,242 dollars, and in 1794, were 233,460 dollars.

Light-House. The Light-House, near the town of Lewes, is a fine stone structure, eight stories high.

Religion. In this state, there is a variety of religious denominations, Presbyterians, Episcopalians, Baptists, and Methodists. The Swedish church in Wilmington is one of the oldest churches in the United States.

Constitution. The constitution of this state delegates the legislative power to a General Assembly, consisting of a senate and house of representatives ; and the executive, to a governor. The governor is chosen for three years ; but he is not eligible for the next three.

Long W. from Philad.

NORTH-WESTERN & INDIANA TERRITORIES.

SITUATION AND EXTENT.

	Miles.	
Length 1170	} between	{ 37° and 50° N. lat.
Breadth 800		{ 6° and 23° W. long.

Boundaries. This extensive tract of country is bounded north, by part of the northern boundary line of the United States: east, by Pennsylvania: south by the Ohio river: west, by the Mississippi.

Civil Divisions. That part of the territory in which the Indian title is extinguished, and which is settling under the government of the United States, is divided into four counties, viz. Washington, Hamilton, St. Clair, and Knox.

Rivers. The Muskingum is 250 yards wide at its confluence with the Ohio, and is navigable by large batteaux and barges to the Three Legs: and, by small ones, to the lake at its head. It is confined by banks so high as to prevent its overflowing. From its source, by a portage of one mile, a communication is opened to Lake Erie, through the Cayahoga river, which is a stream of great utility, not obstructed by any falls, but navigable through the whole distance.

The Hockhocking resembles the Muskingum, though somewhat inferior in size. It is navigable for large boats about 70 miles, and for small ones much further. On the banks of this very useful stream, are found inexhaustible quarries of free stone, large beds of iron ore, and some rich mines of lead. Coal mines and salt springs are frequent in the neighbourhood of this stream.

The great Scioto is a larger river than either of the preceding, and opens a more extensive navigation. It is passable for large barges 200 miles, with a portage of only four miles to Sandusky river, a good navigable stream, that falls into Lake Erie. The stream of Scioto is gentle, no where broken by falls. At some places, in the spring of the year, it overflows its banks, providing for large natural rice plantations. Salt springs, coal mines, white and blue clay, and free stone, abound in the country adjoining this river. Its banks are high good land, which prevent its overflowing.

The Little Miama is too small for batteaux navigation.

The Great Miama has a very stony channel, and a swift stream, but no falls. It is formed of several large branches, which are passable for boats a great distance. It interlocks with the Scioto.

The Wabash is a beautiful river, with high and fertile banks. It empties into the Ohio, by a mouth 270 yards wide, 20 miles below Fort Pitt. In the spring, summer, and autumn, it is passable with batteaux drawing three feet water, 412 miles, to Ouiatanon, a small settlement, on the west side of the river, and ceded to the United States, by the Treaty of 1795, with the Indians; and for large canoes 197 miles further, to the Miami carrying place, 9 miles from Miami village.

The rivers A'Vase and Kaskaskias empty into the Mississippi from the northeast; the former is navigable for boats, 60, and the latter about 130 miles. They both run through a rich country, which has extensive meadows.

Between the Kaskaskias and Illinois rivers, which are 84 miles apart, is an extensive tract of level, rich land, terminating in a high ridge, about fifteen miles from the Illinois river. In this delightful vale are a number of villages.

One hundred and seventy-six miles above the Ohio, and 18 miles above the Missouri, the Illinois empties into the Mississippi from the northeast, by a mouth about 400 yards wide. This river is bordered with fine meadows, which, in some places, extend as far as the eye can reach. This river furnishes a communication with Lake Michigan, by the Chicago river, between which and the Illinois are two portages, the longest of which does not exceed four miles.

Face of the Country, Soil and Productions. No part of the federal territory, probably unites so many advantages,

in point of health, fertility, and variety of productions, as that tract which stretches from the Muskingum to the Scioto and the Great Miami rivers.

The lands bordering on the several rivers, are interspersed with all the varieties of soil; large level meadows, of many miles extent, intersected by valuable ridges of wood land, and some swamps, make it deservedly esteemed as the garden of America.

The prevailing growth of timber, is, maple or sugar tree, sycamore, black and white mulberry, black and white walnut, butternut, chesnut; white, black, Spanish and chesnut oaks, hickory, cherry, buckwood or horse chesnut, honey locust, elm, cucumber tree, lynn tree, gum tree, iron wood, ash, aspin, sassafras, crab apple tree, papaw or custard apple, a variety of plum trees, nine bark spice, and leather wood bushes. Both the high and low lands produce vast quantities of natural grapes of various kinds. Cotton is the natural production of this country, and grows in great perfection.

The sugar maple is a most valuable tree for an inland country. One tree will yield about ten pounds of sugar a year, and the labour is very trifling. The sap is extracted in the months of February and March, and granulated by the simple operation of boiling, to a sugar equal in flavor and whiteness to the best Muscovado.

Springs of excellent water abound in every part of this country.

Very little waste land is to be found in all this territory. The swamps may be readily drained, and made into arable and meadow land: The gentle rising grounds, are capable of tillage. They are of a deep rich soil, covered with heavy timber.

Principal Towns. Marietta, at the mouth of the Muskingum, 146 miles S. W. of Pittsburg.

Belpre between the Muskingum and Hockhocking rivers, and opposite the mouth of the little Kenhawa river, about 14 miles below Marietta.

Massie Ville on the Ohio river, in the midst of a fertile country. The road from Limestone in Kentucky to Wheeling, passes through this town.

Cincinnati, a flourishing town between the great and little Miami rivers.

Chilicothe, on the W. side of the Scioto river, at the mouth of Paint creek, is established as the seat of government for this territory.

Columbia, about 8 miles E. by S. of Cincinnati, on the west side of the mouth of the little Miami river.

Animals, &c. This country is well stocked with wild game of every kind. Innumerable herds of deer, and wild cattle, shelter in the groves, and feed in the extensive bottoms that every where abound. Turkeys, geese, ducks, swans, teal, pheasants, partridges, &c. are in greater plenty here, than the tame poultry are in any part of the old settlements in America.

The rivers are well stored with fish of various kinds, and many of them of an excellent quality. They are generally large, though of different sizes. The cat-fish, which is the largest, and of a delicious flavour, weighs from 6 to 80 pounds.

Ports. The posts established for the protection of the frontiers, are as follow: Washington or Cincinnati, Hamilton, Jefferson, St. Clair, Greeneville, Wayne, Defiance, Recovery, and St. Vincennes, or Knox.

Government, &c. By an ordinance of Congress, passed on the 13th of July, 1787, this country, for the purposes of temporary government, was erected into one district; subject, however, to a division, when circumstances shall make it expedient.

In the same ordinance it is provided, that Congress shall appoint a governor, whose commission shall continue in force three years, unless sooner revoked—a secretary, to continue in office four years, unless sooner removed—and three judges, who are to hold their commissions during good behaviour.

The settlement of this country was checked for several years, by an unhappy Indian war. Peace is now restored, and an advantageous treaty concluded with the Indians, by General Wayne, at Greeneville, in June, 1795, by which a vast tract of country is now peaceably ceded to the United States, within a line from opposite Kentucky river, northward to Fort Recovery, thence eastward passing Loramier's store, to fort St. Lawrence, at the Tuscarora's crossing place, at the head of the Muskingum, and thence northward along the Cayahoga river, to lake Erie; together with a number of tracts of various sizes, in the Indian country, for the purpose of establishing posts and trading houses.

By an Act of Congress passed May, 1800, a part of this Territory has been separated and named Indiana, and a regular government established therein.

SOUTHERN STATES.

VIZ. MARYLAND, VIRGINIA, KENTUCKEY, TENNESSEE,
NORTH CAROLINA, SOUTH CAROLINA, GEORGIA, and
THE MISSISSIPPI TERRITORY.

SITUATION AND BOUNDARIES:

This extensive division is bounded north, by Pennsylvania and the Ohio river; west, by the Mississippi; south, by East and West Florida; east, by the Atlantic Ocean, and the Delaware state. It is intersected in a N. E. and S. W. direction, by the range of Allegany mountains, which give rise to many noble rivers, which fall either into the Atlantic on the east, or the Mississippi on the west. From the sea-coast, 60, 80, and in some parts, 100 miles back towards the mountains, the country, generally speaking, is extremely level; and a very large proportion of it is covered, in its natural state, with pitch pines. In the neighbourhood of stagnant waters, which abound in this level country, the inhabitants are sickly. In the back, hilly and mountainous country, they are as healthy as in any part of America.

The following may be considered as the principal productions of this division—tobacco, rice, indigo, wheat, corn, cotton, tar, pitch, turpentine, and lumber.

In this district is fixed the permanent seat of the general government.

MARYLAND.

SITUATION AND EXTENT.

Miles.

Length 198 } between { $37^{\circ} 56'$ and $39^{\circ} 43'$ N. lat.
Breadth 130 } { $0^{\circ} 2'$ and $4^{\circ} 21'$ W. lon.

Boundaries. Bounded north, by Pennsylvania; east, by Delaware state, and the Atlantic Ocean; south and west, by Virginia.

Civil Divisions and Population. This state is divided into 19 counties, viz. Hartford, Baltimore, Baltimore town, Ann Arundel, Frederick, Allegany, Washington, Montgomery, Prince George, Calvert, Charles, St. Mary's, Cecil, Kent, Queen Ann, Caroline, Talbot, Somerset, Dorchester, and Worcester.

Bays and Rivers. Chesapeak Bay divides this state into eastern and western divisions. This bay is the largest in the United States. From the eastern shore in Maryland, it receives Pokomoke, Nanticoke, Choptank, Chester and Elk rivers. From the north, the rapid Susquehannah, and from the west, Gunpowder, Patapsco, Severn, Patuxent and Patowmac, half of which is in Maryland, and half in Virginia.

Patapsco pursues a south and southeast course, till it reaches Elkridge landing, about 8 miles S. W. of Baltimore; it there turns eastwardly, over falls, and widens into a broad stream to its mouth. It is navigable for vessels drawing 16 feet water, to Fell's point, at Baltimore.

Patowmac rises by two branches, the northern and southern, whose sources are near the Allegany mountains. From the head spring of its north branch, its course is N. E. to fort Cumberland: and after pursuing a winding and

MARYLAND

Philad^a

59

London.

76

75

W. Barker sculp

circuitous course, receiving several streams, the principal of which are the Shenandoah, the eastern branch, and the Connecocheague, empties into the Chesapeak, where it is 7 1-2 miles wide. The distance from the Capes, to the head of tide water, is more than 300 miles : From thence it is obstructed by four Falls, viz. the little falls, 13 miles above Alexandria ; the great falls, 6 miles higher ; the Seneca, or Senegar falls, 6 miles higher ; and the Shenandoah falls, 60 miles above the Seneca, and 120 miles below Cumberland.

Severn is a short river, running S. E. to Chesapeak Bay, passing by Annapolis.

Patuxent rises in Ann Arundel county, and running south-eastwardly, and then eastwardly, empties into the bay, about 18 miles north of the Patowmac.

Face of the Country, Climate, Soil and Productions. The ground is uniformly level and low in most of the counties on the eastern shore. Here are also large tracts of marsh, which, during the day, load the atmosphere with vapour, that falls in dew, in the close of the summer and fall seasons, which are sickly. The spring and the early part of summer are most healthy.

The genuine white wheat, and the bright Kite's foot tobacco, peculiar to Maryland, are the staple commodities.

In the interior country, on the uplands, considerable quantities of hemp and flax are raised.

Character. The greater part of the inhabitants, live on their plantations. The inhabitants of the populous towns, and those from the country, who have intercourse with them, are, in their manners and customs, genteel and agreeable ; and singularly hospitable and kind to strangers of good deportment and fair character.

The inhabitants are made up of various nations, of many different religious sentiments.

Chief Towns. Annapolis (city) is the capital of Maryland, and the wealthiest town of its size in America. It is situated near the mouth of Severn river, on a healthy spot, 28 miles south of Baltimore.

The state house stands in the centre of the city, from whence the streets diverge in every direction, like radii. It is an elegant building.

Baltimore has had the most rapid growth of any town on the continent. It lies in lat. 39° 21' on the north side of Patapsco river, around what is called the bason. It is

divided from Fell's Point, by a creek, over which are two bridges. The situation of the town is low, and was formerly unhealthy ; but the improvements that have been made, particularly that of paving the streets, have rendered it tolerably healthy. North and east of the town, the land rises and affords fine prospects. Three banks are established, and a public library instituted.

Georgetown stands on the bank of the river Potowmac, about 160 miles from its entrance into Chesapeake Bay, on broken irregular ground, considerably elevated above the surface of the river.

Fredericktown is a fine flourishing inland town, mostly on one broad street. It is four miles south of Catokton mountain, in a fertile country. It has four places for public worship, a public gaol, and a market house.

Hagarstown, or Elizabeth, is situated in the beautiful and well cultivated valley of Conegocheague. It has three churches, a court house, a market house, and a substantial stone gaol.

Elkton is situated near the head of Chesapeake Bay, on a small river which bears the name of the town.

The city of Washington, in the territory of Columbia, was ceded by the States of Virginia and Maryland, to the United States, and by them established as the seat of their government, after the year 1800. The city stands at the junction of the rivers Patowmac and the Eastern Branch, lat. $38^{\circ} 53' N.$ extending nearly four miles up each.

This metropolis of the Union, is situated upon the great post road through the Atlantic States.

The plot of this city is upon a grand scale, and an improvement on the best planned cities in the world. The scites for the intended public buildings are on the most advantageous grounds, commanding extensive prospects. The Capitol is situated on a very beautiful eminence, from whence a complete view of the city, and a considerable part of the country around, forms a charming scene. The President's house, standing on a rising ground, possesses a delightful view of the water, also of the Capitol, and the most material parts of the city. Avenues, or diagonal streets, from 130 to 160 feet wide, are calculated to produce a variety of charming prospects.

Trade. The trade of Maryland is principally carried on from Baltimore, with the other states, the West In-

dies, and some parts of Europe. To these places they send annually about 25,000 hogsheads of tobacco, besides large quantities of wheat, flour, pig iron, lumber and corn—beans, pork, and flax-seed in smaller quantities; and receive in return, clothing for themselves and negroes, and other dry goods, wines, spirits, sugars and other West India commodities.

The exports in 1799 amounted to 16,299,609 dollars. The tonnage in 1793 was 96,391 tons.

Religion. The Roman Catholics, who were the first settlers in Maryland, are the most numerous religious sect. Besides these there are Protestant Episcopalians, English, Scotch, and Irish Presbyterians, German Calvinists, German Lutherans, Friends, Baptists, Methodists, Mennonists, and Nicolites or new Quakers.

Seminaries of Learning. These are Washington Academy, in Somerset county:

Washington College, at Chestertown, in Kent county.

St. John's College, at Annapolis. The two colleges constitute one university, by the name of "The University of Maryland," whereof the governor of the state, for the time being, is chancellor, and the principal of one of them vice-chancellor.

The Roman Catholics also have erected a college at Georgetown, on Patowmac river, for the promotion of general literature, which is in a flourishing state.

The Methodists have instituted a College at Abington, in Hartford county, by the name of Cokesbury College. It was burned down a few years since.

Constitution. The legislature is composed of two distinct branches, a senate and house of delegates, and styled "The General Assembly of Maryland." The house of delegates is composed of four members for each county, chosen annually. The city of Annapolis and town of Baltimore, send each two delegates.

A governor is appointed by the joint ballot of both houses. The governor cannot continue in office longer than three years successively.

W. Barker, sculp.

Climate. It is remarkable, that, proceeding on the same parallel of latitude westwardly, the climate becomes colder, in like manner as when you proceed northwardly. This continues to be the case till you attain the summit of the Allegany, which is the highest land between the ocean and the Mississippi. From thence, descending in the same latitude to the Mississippi, the change reverses ; and it becomes warmer there than it is in the same latitude on the sea side.

Rivers. The Rivers are as follow, viz. Roanoke, James, Nansemond, Appamattox, (a branch of James' river), Rivanna, a small branch of James' river, York river, Rappahannock and Patowmac, east of the mountains.

Beyond the mountains are the Shenandoah river, which empties into the Patowmac, just above the Blue Mountains—the Great and the Little Kanhawa, emptying into the Ohio river, and the Monongahela and Cheat rivers.

Roanoke, within this state, is no where navigable but for canoes.

James' river and its branches afford navigation. Elizabeth river, emptying at the mouth of James', forms a spacious deep harbour, capable of containing 300 ships, and affords eighteen feet water to Norfolk. Craney Island, at the mouth of this river, is fortified, and commands its channel tolerably well. James' river affords a harbour for vessels of any size, in Hampton Roads, and is navigable for vessels of 125 tons, to within a mile of Richmond, at the foot of the falls.

Nansemond, a navigable river, rises in the great dismal swamp, and empties into James' River, a few miles west of Elizabeth.

Appamattox, a south branch of James' river, is navigable to Petersburg, for small vessels.

Rivanna, a northwest branch of James' river, is navigable for batteaux about twenty-two miles, to the southeast mountains.

York River, opposite the town, affords a fine harbour. It then narrows to the width of a mile, between very high banks. At about twenty-eight miles higher up, it receives the waters of the Mattapony, and Pamunkey.

Rappahannock, a large navigable river, has its courses in the blue ridge, and running from N. W. to S. E. enters the Chesapeake.

For the Patowmac see Maryland.

Shenandoah has its source in Augusta county, and pursuing a N. E. course near the western foot of the blue ridge, through a rich, fertile valley, empties into the Patowmac, at its passage through the mountains, forming one of the grandest scenes in nature.

Great Kanhawa is of considerable note, for the fertility of its lands, but its navigation is greatly impeded by its many falls. Green Briar and Elk rivers empty into the Kanhawa, on the northeast side.

Cheat river joins the Monongahela, three miles within the Pennsylvania line, and rises at the foot of the Alleghany mountains.

Mountains. The mountains commence at about 150 miles from the sea-coast, and are disposed in ridges one behind another, running nearly parallel with the sea-coast, though rather approaching it, as they advance north-westwardly. To the southwest, as the tract of country between the sea-coast and the Mississippi becomes narrower, the mountains converge into a single ridge, which, as it approaches the Gulf of Mexico, subsides into a plain country, and gives rise to some of the waters of that gulf, and particularly to a river called Apalachicola. The passage of the Patowmac through the blue ridge, is perhaps one of the most stupendous scenes in nature.

The Alleghany being the greatest ridge, separates the rivers falling into the ocean, from those emptying into the Mississippi. For though all the other ridges are pierced in many places by rivers, the Alleghany remains entire. The Peaks of Otter, a part of the blue ridge, are supposed to be the highest in the United States.

Face of the Country, Soil, Productions, &c. The whole country below the mountains, which are about 150, some say, 200 miles from the sea, is level, and seems, from various appearances, to have been once washed by the sea.

The soil below the mountains, though not rich, is well suited to the growth of tobacco and Indian corn, and some parts of it for wheat and barley. Good crops of cotton, flax, and hemp, are also raised; and, in some counties, they have plenty of cider, and exquisite brandy, distilled from peaches.

Curiosity. The Natural Bridge is the most sublime of Nature's works. It is on the ascent of a hill, which seems to have been cloven through its length by some great con-

vulsion. The fissure, just at the bridge, is by some measurements 270 feet deep, by others only 205. It is about forty-five feet wide at the bottom, and ninety feet at the top. Its breadth in the middle is about sixty feet, but more at the ends; and the thickness of the mass, at the summit of the arch, about forty feet. The creek is called Cedar Creek.

Medicinal Springs. The most efficacious are two springs in Augusta, near the sources of James' river, where it is called Jackson's river. They rise near the foot of the ridge of mountains, generally called the Warm Spring Mountain. The one is distinguished by the name of the Warm Spring, and the other of the Hot Spring.

The Sweet Springs are in the county of Botetourt, at the eastern foot of the Allegany, about forty-two miles from the Warm Springs.

In the low grounds of the Great Kanhawa, seven miles above the mouth of Elk River, is a hole in the earth, of the capacity of thirty or forty gallons, from which issues constantly a bituminous vapour, in so strong a current, as to give to the sand about its orifice the motion which it has in a boiling spring.

Chief Towns. Norfolk will probably become the emporium for the chief part of the trade of the Chesapeake bay and waters. Secondary to this place, are the towns, Petersburg on Appamattox, Richmond, on James river, Newcastle on York river, Fredericksburg on Rappahannock, and Alexandria on Patowmac.

Alexandria stands on the south bank of the Patowmac river in Fairfax county. Its situation is elevated and pleasant. This town, in consequence of its vicinity to the city of Washington, will probably be one of the most thriving commercial places in the United States; the depth of the Patowmac admitting vessels of any burden close to the town.

Mount Vernon, the celebrated seat of General Washington, is pleasantly situated on the Virginia bank of the river Patowmac, where it is nearly two miles wide, and is about 280 miles from the sea. It is nine miles below Alexandria, and not far distant from the beautiful seat of the late Col. Fairfax, called Bellevoir.

Fredericksburg is on the south side of Rappahannock river, 110 miles from its mouth.

Richmond is the present seat of government, and stands

on the north side of James' river, just at the foot of the falls. A large state house has been erected on the hill. The lower part of the town is divided by a small creek, over which is a good bridge. A bridge across James' river, near 400 yards long, connects Richmond with Manchester. This bridge is the private property of Colonel Mayo.

Petersburg, twenty-five miles southward of Richmond, stands on the south side of Appamattox river. It is unhealthy, being shut from the access of the winds by high hills on every side. It is formed without regularity, and very little elegance, business being the main object in this place.

Williamsburg is sixty miles eastward of Richmond, situated between two creeks, one emptying into James' river, and the other into York river. It is regularly laid out into parallel streets, about a mile in length. At the ends of the principal street are the college and the capitol. Besides these there is an Episcopal church, a prison, a court house, a market, and an hospital for lunatics.

Yorktown is thirteen miles eastward from Williamsburg, at the south side of York river, near its mouth.

Colleges, Academies, &c. The college of William and Mary was founded about the beginning of this century. The academy in Prince Edward county has been erected into a college, by the name of Hampden Sydney college. There are several academies in Virginia, viz. one at Alexandria, one at Norfolk, one at Hanover, and others in other places.

Religion. The denominations of christians in Virginia are Presbyterians, Episcopalians, Roman Catholics, Baptists and Methodists. The first are by far the most numerous.

Commerce. The exports of this state consist chiefly of tobacco, wheat, Indian corn, tar, pitch, turpentine, &c.

The exports in 1798 amounted to 6,113,451 dollars. The tonnage the same year was 69,586 tons.

KENTUCKEY.

SITUATION AND EXTENT.

	Miles.		
Length	370	} Between	{ 7° 22' & 15° 15' W. long. 36° 30' & 39° 10' N. lat.
Breadth	200		

Boundaries. Bounded north by the Ohio ; west, by the Mississippi river ; south by Tennessee State ; east, by Sandy river, and the Cumberland mountains, till they strike the northern boundary of North Carolina.

Civil Divisions. Kentucky is divided into thirty-eight counties, viz.

Boone, Campbell, Pendleton, Gallatin, Henry, Harrison, Bracken, Mason, Bullet, Shelby, Franklin, Woodford, Bourbon, Fayette, Fleming, Montgomery, Harden, Garrard, Jessamine, Clarke, Ohio, Henderson, Livingston, Muhlenberg, Christian, Logan, Warren, Barren, Greene, Cumberland, Pulaski, Mercer, Lincoln, Madison, Jefferson, Washington, Scott, and Logan.

Rivers. The river Ohio washes the northern side of Kentucky, in its whole extent. Its principal branches are, Sandy, Licking, Kentucky, Salt, Green, and Cumberland rivers. These branch in various directions, into rivulets, of different magnitudes, fertilizing the country in all its parts.

The banks of the rivers are generally high, and composed of lime stone. After heavy rains, the water in the rivers rises from ten to thirty feet.

Sandy, Licking and Kentucky rivers rise near each

other, interlocking among the Cumberland mountains.—Of these, Sandy river only breaks through a part of the mountains. This river divides Kentuckey from Virginia.

Licking river, from its source, runs in a northwest direction upwards of one hundred miles, and empties into the Ohio opposite Fort Washington, between the two Miami rivers.

Kentuckey is a very crooked river, of more than two hundred miles in extent, emptying into the Ohio, about midway between the great Miami and the rapids.

Salt river has four different sources, which, though heading near each other, pursue circuitous courses, and surrounding a fine tract of land, unite in one stream, about fifteen miles from its mouth, emptying into the Ohio, twenty miles below the rapids at Louisville.

Green river rises near the heads of Salt river, and pursuing a westerly course, empties into the Ohio, about fifty miles above the Wabash river.

Cumberland river interlocks with the head of Kentuckey river, pursues a variety of courses (the greatest part being in Tennessee), and finds its entrance into the Ohio, after watering a spacious country, of upwards of five hundred miles in length, about fifty miles from the Mississippi.

The Tennessee river has its mouth ten miles below the Cumberland, and waters this state, in its western parts.

Springs. There are five noted salt springs, or licks, in this country, viz. the higher and lower Blue Springs, on Licking river—the Big Bone lick, Drenon's lick, and Bullet's lick, at Saltsburg.

Face of the Country, Soil and Produce. This whole country, as far as has yet been discovered, lies upon a bed of lime stone, which in general is about six feet below the surface, except in the vallies, where the soil is much thinner.

Kentuckey in general is well timbered. Of the natural growth of this country, we may reckon the sugar maple, the coffee, the papaw, the hackberry, and the cucumber tree. The coffee tree resembles the black oak, and bears a pod, which encloses a seed, whereof a drink is made, not unlike coffee. Besides these, there are the honey locust, black mulberry, and wild cherry, of a large size. The buck-eye, an exceedingly soft wood, is the horse

W. Barker sulp

chestnut of Europe. The magnolia bears a beautiful blossom, of a rich and exquisite fragrance.

The accounts of the fertility of the soil in this country, have, in some instances, exceeded belief; and probably have been exaggerated. That some parts of Kentucky, particularly the high grounds, are remarkably good, all accounts agree. The lands of the first rate are too rich for wheat, and will produce fifty and sixty, and in some instances, it is affirmed, one hundred bushels of good corn, an acre. In common, the land will produce thirty bushels of wheat or rye per acre. Barley, oats, flax, hemp, and vegetables of all kinds, common in this climate, yield abundantly.

Climate. The climate is healthy and delightful, some few places, in the neighbourhood of ponds and low grounds, excepted. The inhabitants do not experience the extremes of heat and cold. Snow seldom falls deep or lies long. The winter, which begins about Christmas, is never longer than three months, and is commonly but two, and is so mild that cattle can subsist without fodder.

Chief Towns. Frankfort is the capital of the state, and is situated on the west bank of Kentucky river, in Franklin county. The legislature and supreme courts of the state hold their sessions here. The state house is a large stone building.

Lexington, which stands on the head waters of Elkhorn river, is the largest town in Kentucky, twenty-four miles eastward of Frankfort, in the midst of a fine tract of country. Here courts of justice are held.

Louisville is pleasantly situated on the south bank of the Ohio, at the rapids.

A number of other towns are increasing: viz. Washington, Charleston, Georgetown, Boonesborough, Versailles, Shelbyville, Bairdstown, Bealsburgh, Danville, Harrodsburgh, Stanford, Crab Orchard, &c.

Religion. The religious denominations here, are Presbyterians, Baptists, Methodists, Episcopalians, and Roman Catholics.

Constitution. The legislative power is vested in a general assembly, consisting of a senate and house of representatives; the supreme executive, in a governor; the judiciary, in the supreme court of appeals, and such inferior courts as the legislature may establish. The repre-

representatives are chosen annually, by the people ; the governor and senators are chosen for four years, by electors, appointed for the purpose ; the judges are appointed during good behaviour, by the governor, with advice of the senate.

Literature and Improvements. The legislature of Virginia, while Kentuckey belonged to that state, made provision for a college in it, and endowed it with very considerable landed funds. The Rev. John Todd procured from various gentlemen in England and other places, a very handsome library for its use. Another college in this state is in contemplation, and funds are collecting for its establishment. Schools are established in the several towns, and, in general, regularly and handsomely supported. They have several printing offices, and have erected a paper mill, an oil mill, fulling mills, saw mills, and a great number of valuable grist mills. Their salt works are more than sufficient to supply all their inhabitants, at a low price. They make considerable quantities of sugar from the sugar trees.

Antiquities and Curiosities. The number of old forts found in the Kentuckey country, are the admiration of the curious, and a matter of much speculation. They are mostly of an oblong form, situated on strong, well chosen ground, and contiguous to water. When, by whom, and for what purpose, they were thrown up, is uncertain.—They are undoubtedly very ancient, as there is not the least visible difference in the age or size of the timber growing on or within those forts, and that which grows without ; and the oldest natives have lost all tradition respecting them. Dr. Cutler, who has accurately examined the trees in these forts, and which he thinks, from appearances, are the second growth, is of opinion, that they must have been built upwards of 1,000 years ago. They must have been the efforts of a people much more devoted to labour, than our present race of Indians ; and it is difficult to conceive how they could be constructed without the use of iron tools. At a convenient distance from these, always stands a small mound of earth, thrown up in the form of a pyramid, which seems in some measure proportioned to the size of its adjacent fortification. On examination they have been found to contain a chalky substance, supposed to be bones, and of the human kind.

The banks, or rather precipices, of the Kentucky and Dick's rivers, are to be reckoned among the natural curiosities of this country. Here the astonished eye beholds 3 or 400 feet of solid, perpendicular rock, in some parts of the lime-stone kind, and in others of fine white marble, curiously chequered with strata of astonishing regularity. These rivers have the appearance of deep artificial canals. Their high rocky banks are covered with red cedar groves.

NORTH CAROLINA.

SITUATION AND EXTENT.

	Miles	
Length	450	} Between { 1° and 9° 30' W. long. 33° 50' and 36° 30' N. lat.

EXAMEN DE LA BIBLIOTHEQUE

ton and Dan Rivers, which unite in Virginia. It empties in Albemarle sound.

Pamtico, or Tar, or Tau river, empties into Pamtico sound. Its course is from northwest to southeast, and is navigable for vessels drawing nine feet water, to Washington, thirty miles from its mouth: and for flats to Tarborough, fifty miles further.

Nuse, or Neus, has its head waters near the Tar river, and empties into Pamtico sound at the southwest, about thirty-five miles below Newbern.

Cape Fear river opens to the sea near the southwest corner of this state. It forms a fine harbour, as far as Wilmington, about thirty-five miles up; it then separates into the northeast, and northwest branches; this last rises near the Dan, and affords the best navigation in North Carolina.

Yadkin rises in the western parts, at the foot of the Apalachian mountains; as also doth the Catawba river.

Sounds, Capes, Inlets, &c. Pamtico sound is a kind of lake or inland sea, from ten to twenty miles broad, and nearly 100 miles in length. It is separated from the sea by a beach of sand, scarcely a mile wide, through which are several inlets. Occracock is the only one that will admit vessels of burden to Edenton or Newbern. This place has been fortified.

Albemarle sound, sixty miles in length, and about ten in breadth, is to the north of Pamtico, and communicates with it, as doth

Core sound, which lies south of Pamtico.

Cape Hatteras is north of Occracock. Cape Lookout is south of Cape Hatteras, opposite Core sound. Cape Fear is remarkable for a dangerous shoal, called, from its form, the Frying Pan. This shoal lies at the entrance of Cape Fear river.

Swamps. There are two swamps that have been called *Dismals*. Great Dismal is on the dividing line between Virginia and North Carolina. In the midst of this swamp, is a lake about seven miles long, and five broad, called Drummond's lake: it lies in Virginia. A canal is making, about a mile to the eastward of this lake, from the head of Pasquotank to the head of Elizabeth river. The other Dismal is in Currituck county on the south side of Albemarle sound.

Principal Towns. Newbern is the largest town in the

state. It stands on a flat sandy point of land, formed by the confluence of the rivers Neus on the north, and Trent on the south.

The houses are generally built of wood, except the public buildings, which are of brick : viz. an Episcopal church, a court house, a gaol, and an old building called the palace, now out of repair, and used only as a dancing hall, and a school room.

Edenton is situated on the north side of Albemarle Sound. It has a brick Episcopal church, a court house, and a gaol.

Wilmington is situated on the east side of the eastern branch of Cape Fear, and 95 miles south-westward of Newbern. It is regularly built, and has a handsome Episcopal church, a court house, and a gaol.

Hillsborough is an inland town, situated in a high, healthy and fertile country, 180 miles north west from Newbern.

Halifax is a pretty town on the western bank of the Roanoke, about six miles below the great falls.

Fayetteville stands on the west side of the N.W. branch of Cape Fear river, about a mile from its banks, and 90 above Wilmington. It is well built on both sides of Blount's creek, and has two handsome buildings for the Courts of Justice, and town meetings. These buildings are open below, and afford excellent market places. The Free Mason's lodge is a large handsome edifice.

Washington is situated in the county of Beaufort, on the north side of Tar river.

Greeneville is situated in Pitt county, on the south bank of Tar river. In this town is Pitt academy.

Tarborough is situated in the county of Edgecomb, on the south bank of Tar river.

Raleigh, situated about the centre of the state, is the seat of government.

Face of the Country, Soil, &c. The state of North Carolina, in its whole width, for 60 miles from the sea, is level. A great proportion of this tract lies in forest, and is barren. On the banks of some of the rivers, particularly of the Roanoke, the land is fertile and good. Interspersed through the other parts, are glades of rich swamp, and ridges of oak land, of a black, fertile soil. Sixty or eighty miles from the sea, the country rises into hills and mountains.

Natural Productions, Manufactures, &c. The large natural growth of the plains, in the low country, is almost universally pitch pine, a tall handsome tree, far superior to the pitch pine of the northern states. This tree may be called the staple commodity of North Carolina. It affords pitch, tar, turpentine, and various kinds of lumber, which, together, constitute at least one half of the exports of this state. No country produces finer white and red oak for staves. The swamps abound with cyprus and bay trees.

The Mistletoe is common in the back country. This is a shrub, which differs in kind, perhaps, from all others. It never grows out of the earth, but on the tops of trees. The roots, if they may be so called, run under the bark of the tree, and incorporate with the wood.

Wheat, rye, barley, oats, and flax, grow well in the back hilly country; Indian corn and pulse of every kind, in all parts. Cotton and hemp are also considerably cultivated here, and might be raised in much greater plenty.

The amount of exports in 1799, were 485,921 dollars.

Religion. The western parts of this state, are chiefly inhabited by Presbyterians from Pennsylvania.

The Moravians have several flourishing settlements in the upper part of this state.

The Friends or Quakers have a settlement in New Garden, in Guilford county, and several congregations at Perquimons and Pasquotank. The Methodists and Baptists are numerous and increasing.

University and Academies. The General Assembly of this State, passed a law incorporating the University of North Carolina, in the year 1789.

There is a very good academy at Warrenton, another at Williamsborough, in Grenville, and three or four others in the state, of considerable note.

Constitution. By the constitution of this state, all legislative authority is vested in two distinct branches, both dependent on the people, viz. a Senate and House of Commons, which, when convened for business, are styled the General Assembly.

The senate is composed of representatives, one from each county, chosen annually by ballot.

The house of commons consists of representatives chosen in the same way, two for each county, and one for each of the towns of Edenton, Newbern, Wilmington, Salisbury, Hillsborough, Halifax, and Fayetteville.

T E N N E S S E E.

SITUATION AND EXTENT.

Miles.

Length	442	} Between	{	7° 45' and 16° 56' W. long.
Breadth	104			35° and 36° 30' N. lat.

Boundaries. Bounded north, by Kentucky and part of Virginia; east, by North Carolina; south, by South Carolina and Georgia; west, by the Mississippi.

Civil Divisions. This state is divided into 14 counties, viz.

Washington, Sullivan, Greene, Hawkins, Knox, Grainger, Robertson, Cocke, Jefferson, Sevier, Blount, Davidson, Sumner, and Tennessee.

Climate. The climate is temperate and healthy. In the tract lying between the Great Island, as it is called, and the Kanhawa in Virginia, the summers are remarkably cool, and the air rather moist. Along the rivers, and in the western part of the state, the climate is much warmer, and the soil better adapted to the productions of the southern states.

Rivers and Mountains. The Tennessee river, called also the Cherokee, is the largest branch of the Ohio. It rises in the mountains of Virginia; and pursues a course of about 1,000 miles south and southwest, receiving from both sides a number of large tributary streams. It then turns to the north, in a circuitous course, and mingles with the Ohio, nearly 60 miles from its mouth. From its entrance into the Ohio, to the Muscle shoals, 250

miles, the current is very gentle, and the river deep enough, at all seasons, for the largest row boats. The Muscle shoals are about 20 miles in length. At this place, the river spreads to the width of three miles, and forms a number of islands, and is of difficult passage, except when there is a swell in it. From these shoals to the whirl or suck, the place where the river breaks through the Great Ridge of Cumberland mountains, is 250 miles, the navigation all the way excellent for boats of 40 or 50 tons.

The Cumberland mountains, in their whole extent, from the Great Kanhawa to the Tennessee, consist of the most stupendous piles of craggy rocks, of any mountains in the western country.

The *Whirl*, as it is called, is reckoned a great curiosity. The river, which, a few miles above, is half a mile wide, is here compressed within about 100 yards. Just as it enters the mountain, a large rock projects from the northern shore, in an oblique direction, which renders the bed of the river still narrower, and causes a sudden bend; the water of the river is of course thrown with great rapidity against the southern shore, whence it rebounds around the point of the rock, and produces the *Whirl*, which is about 80 yards in circumference. Canoes have often been carried into this whirl, and escaped by the dexterity of the rowers, without damage. In less than a mile below the Whirl, the river spreads into its common width, and, except at the Muscle shoals, already mentioned, is beautiful and smooth, till it mingles with the Ohio. The principal tributary streams to the Tennessee, are the Holston, Peleson or Clinch, and Duck rivers.

The Shawanee, now called Cumberland river, one of the southern branches of the Ohio, is next in size to the Tennessee, and extends eastward nearly as far, but runs a much more direct course. It is navigable for small craft 150 miles above Nashville.

There are five navigable rivers in this state, which discharge themselves immediately into the Mississippi, viz. Wolf, Hatchee, Forked Deer, Obion and Reelfoot.

The Cumberland, or Great Laurel Ridge, is the most stupendous pile in the United States. It abounds with ginseng, and stone coal. Clinch mountain is south of these; in which Burk's garden and Morris's Nob, might be described as curiosities.

Animals. A few years since, this country abounded with large herds of wild cattle, improperly called Buffaloes ; they are still to be found on some of the south branches of Cumberland river. Elk or moose are seen in many places, chiefly among the mountains. The deer are become comparatively scarce. Enough of bears and wolves yet remain. Beavers and otters are caught in plenty on the upper branches of Cumberland and Kentucky rivers.

The mammoth, the king of the land animals, is supposed to have been formerly an inhabitant of this country.

Commerce. This country furnishes many valuable articles of export, such as fine waggon and saddle horses, beef, cattle, ginseng, deer skins and furs, cotton, hemp and flax, which may be transported by land ; also, iron, lumber, pork and flour, which will be exported in great quantities, now the navigation of the Mississippi is opened.

Religion. The Presbyterians are the prevailing denomination of Christians in this district. There are also some of the Baptist, Roman Catholic, and Methodist denominations.

Literature. Three colleges are established by law in this State, viz. Greenville college in Green county ; Blount college at Knoxville, and Washington college in Washington county. A society has been established, who style themselves, " A Society for promoting Useful Knowledge."

Principal Towns. Knoxville, beautifully situated on the north bank of the Holston, is the seat of government in this state.

Nashville is situated on the south bank of Cumberland river. The courts for the district of Mero are semi-annually held here ; and it has two houses for public worship, and a handsomely endowed academy.

Jonesborough is the seat of the courts held in Washington district. There are twelve other towns of less note in the state.

Indians. The Indian tribes within and in the vicinity of this district, are the Cherokees and Chickasaws. The Cherokees have been a warlike and numerous nation ; but by continual wars, in which they have been engaged, with the northern Indian tribes, they are reduced, and have become weak and pusillanimous.

The Chickasaws, of all the Indian tribes within the limits

its of the United States, merit the most from Americans, having at all times maintained a brotherly attachment to them. They glory in saying, that they never shed the blood of an Anglo-American. There is so great an affinity between the Chickasaw and Choctaw languages, that the common people can converse together, each speaking in his own dialect. They are a personable people, and have an openness in their countenances and behaviour, uncommon among savages. These nations say they are the remnant of a great nation that once lived far to the west, which was destroyed by the Spaniards, for whom they still retain an hereditary hatred.

SOUTH CAROLINA.

SITUATION AND EXTENT.

Miles.

Length 270 } between { $3^{\circ} 34'$ and $9^{\circ} 20'$ W. long.
 Breadth 250 } { 32° and 35° N. lat.

Boundaries. Bounded, north, by North Carolina ; east, by the Atlantic Ocean ; south and southwest, by Savannah river, which divides this state from Georgia.

Civil Divisions. This state is divided into Districts and Parishes, viz.

Districts. Beaufort, Charleston, Georgetown, Orangeburg, Camden, Cheraw, Ninety-Six, Pinckney and Washington.

Parishes. St. Helena, St. Luke's, Prince William, St. Peter's, St. Philip's, St. Michael's, St. Bartholomew, St. John's, Berkley, St. George's (Dorchester,) Stephen's, St. James's, (Santee,) St. Thomas', Christ's Church, St. James', (Goose Creek,) St. John's (Colleton,) St. Andrew's, St. Paul's, All Saints', Prince George's, Frederick, Lewisburg, Orange, Lexington, Winton, Clarendon, Richland, Fairfield, Claremont, Lancaster, Kershaw, Marlborough, Chesterfield, Darlington, York, Chester, Union, Spartanburg, Pendleton, Greenville, Abbeville, Edgefield, Newbury, and Laurens.

Rivers. This state is watered by four large navigable rivers. The Savannah river washes it in its whole length from south east to northwest, and divides it from Georgia.

Edisto rises in two branches from a remarkable ridge in the interior of the state. These branches unite below Orangeburg, and form the Edisto, or Pompon river, which empties into the Atlantic by two mouths, embracing Edisto Island.

Santee is the largest river in the state, and discharges itself into the ocean to the southward of Georgetown. About 120 miles from its mouth, it branches into the Congaree and Wateree : the latter, or north branch, passes through the State to the Catawba Tract. The Congaree is formed by the Saluda and Broad rivers, and their numerous branches.

Pedee river rises in North Carolina, where it is called Yadkin. It empties into Winyaw harbour at Georgetown, about 15 miles from the sea. The Pedee receives several streams, Little Pedee, Lynch's, Black, and Waccawmaw rivers.

Canal. A company has been incorporated for the purpose of connecting Cooper and Santee rivers, by a canal of 21 miles in length—Cost estimated at 85,000*l.* currency. It is nearly completed.

Mountains. Except the hills of the Santee, the Ridge, and some few other hills, this country is like one extensive plain, till you reach the Tryon Hogback mountains, 220 miles northwest of Charleston. The mountains west and northwest rise much higher than these, and form a ridge, which divides the waters of Tennessee and Santee rivers.

Harbours. The only harbours of note are those of Charleston, Port Royal and Georgetown.

Islands. The sea-coast is bordered with a chain of fine islands, around which the sea flows, opening an excellent inland navigation, for the conveyance of produce to market. The principal of these are Bull's, Dewees's, and Sullivan's Islands, which form the north part of Charleston harbour ; James's, John's, Wadmelaw, Republican, St. Helena, Ladies, Paris, and the Hunting Islands, five or six in number, Hilton Head, Pinckney's, Bull's, Dawfuslies, and some smaller islands.

Chief Towns. Charleston is the only considerable town in South Carolina. It is situated on the tongue of land which is formed by the confluence of Ashley and Cooper rivers. These rivers mingle their waters immediately below the town, and form a spacious and convenient harbour, which communicates with the ocean just

below Sullivan's island, which it leaves on the north, seven miles southeast of the town.

The public buildings are, three banks, an exchange, state house, armoury, poor house, two large churches for Episcopalians, two for Congregationalists, or Independents, one for Scotch Presbyterians, one for Baptists, one for German Lutherans, two for Methodists, one for French Protestants ; besides a meeting house for Quakers, a Roman Catholic chapel, and a Jewish synagogue.

Beaufort, on Port Royal island, is a pleasant little town, distinguished for the hospitality of the inhabitants.

Georgetown, 61 miles N. E. of Charleston, the seat of justice in Georgetown district, stands on a spot of land near the junction of a number of rivers, which, when united in one broad stream, by the name of Winyaw, fall into the ocean, 15 miles below the town.

Columbia, the seat of government, stands just below the junction of Saluda and Broad rivers, on the Congaree, a branch of the Santee.

Camden, on the Wateree, N. W. of the high hills of Santee, is small, and regularly built.

Purysburg, about 20 miles north of Savannah, on the bank of the river. It stands high and pleasant. There are, besides, a number of other towns, but inconsiderable, viz. Jacksonsborough, Orangeburg, Wynnesborough, Cambridge, Granby, and Statesburg.

Soil and Productions. The soil may be divided into four kinds ; first, The pine barren, which is valuable only for its timber. Interspersed among the pine barren, are tracts of land free of timber, and every kind of growth, but that of grass. These tracts are called Savannas, constituting a *second* kind of soil, good for grazing. The *third* kind is that of the swamps and low grounds on the rivers, which is a mixture of black loam and fat clay, producing, naturally, canes in great plenty, cypress, bays, loblolly pines, &c. In these swamps, rice is cultivated, which constitutes the staple commodity of the state. The high lands, commonly known by the name of oak and hickory lands, constitute the *fourth* kind of soil. The natural growth is, oak, hickory, walnut, pine, and locust. On these lands, in the low country, is cultivated, Indian corn principally ; and in the back country, besides these, they raise tobacco in large quantities, wheat, rye, barley, oats, hemp, flax, cotton and silk.

Trade. South Carolina had in 1798, 41,876 tons of shipping ; in 1799, the exports amounted to 8,729,015 dols.

Constitution. The legislative authority is vested in a general assembly, consisting of a senate and house of representatives. There are 124 representatives, and 35 senators appointed among the several districts. The general assembly is chosen on the second Monday of October, and meets on the fourth Monday in November annually. Each house chooses its own officers, judges of the qualifications of its members, and has a negative on the other. The executive authority is vested in a governor, chosen for two years, by both houses of assembly jointly ; but he cannot be re-elected till after four years. A lieutenant governor is chosen in the same manner, for the same time, and holds the office of governor in case of vacancy.

This constitution was ratified June 3, 1790.

State of Literature. Gentlemen of fortune, before the late war, sent their sons to Europe for Education. During the war and since, they have generally sent them to the middle and northern states. There are several respectable academies in Charleston, one at Beaufort, on Republican island, and several others in different parts of the state. Three colleges have lately been incorporated by law ; one at Charleston, one at Wynnesborough, in the district of Camden, the other at Cambridge, in the district of Ninety-Six.

Charitable and other Societies. These are, the South Carolina, Mount Sion, Library, and St. Cecilia societies—a society for the relief of the widows and orphans of clergymen—a Musical society, &c.

Indians. The Catawbas are the only nation of Indians in this state.

Religion. The religious denominations of this state, as to numbers, may be ranked as follows : Presbyterians, including the Congregational and Independent churches, Episcopalians, Baptists, Methodists, Roman Catholics, &c.

Character. The Carolinians are generally affable and easy in their manners, and polite, attentive and hospitable to strangers.

GEORGIA.

SITUATION AND EXTENT.

Miles.

Length 660 } between { $4^{\circ} 42'$ and $16^{\circ} 17'$ W. lon.
Breadth 260 } { 31° and $34^{\circ} 53'$ N. lat.

Boundaries. Bounded east, by the Atlantic Ocean ; south, by East and West Florida ; west, by the river Mississippi ; north and northeast, by South Carolina and Tennessee.

Civil Divisions. The eastern part of the state, which has been laid out into counties, is divided into two districts, Upper and Lower, which are subdivided into 22 counties, which are as follow :

Camden, Glyn, Scriven, Liberty, Burke, Chatham, Brient, Effingham, M'Intosh, Wilkes, Montgomery, Franklin, Hancock, Green, Oglethorpe, Elbert, Warren, Richmond, Columbia, Washington, Jefferson, and Jackson.

Face of the Country. Similar to South Carolina.

Rivers. Savannah river divides this state from South Carolina. Its course is nearly from northwest to southeast. It is formed principally of two branches, by the names of Tugulo and Keowee, which spring from the mountains. It is navigable for large vessels up to Savannah, and for boats, of 100 feet keel, as far as Augusta.

Ogeechee river, about 18 miles south of the Savannah, is a smaller river, and nearly parallel with it in its course.

Alatamaha, about 60 miles south of Savannah river, has its source in the Cherokee mountains, near the head of

W. Barker sc.

Tugulo ; thence it descends through the hilly country, with all its collateral branches, and winds rapidly amongst the hills, 250 miles, and then enters the flat plain country, by the name of the Oakmulgee ; thence meandering 150 miles, it is joined on the east side by the Oconee, which likewise heads in the lower ridges of the mountains. After this confluence, having now gained a vast acquisition of waters, it assumes the name of Alatomaha, when it becomes a large majestic river, flowing with gentle windings, through a vast plain forest, near 100 miles, and enters the Atlantic by several mouths, forming St. Simon's Sound.

Besides these, there are Turtle river, Little Sitilla or St. Ille, Great Sitilla, Crooked river, and St. Mary's, which forms a part of the southern boundary of the United States ; and has its source in the extensive swamp, called Eokenfonoghka or Okefonoke.

The rivers in the middle and western parts of this state, are, Apalachicola, which is formed by the Chatahouchee and Flint rivers, Mobile, Pascagoula and Pearl rivers. All these running southwardly, empty into the Gulf of Mexico.

Swamp. The swamp Eokenfonoghka lies between Flint and Oakmulgee rivers, and is nearly 300 miles in circumference. In wet seasons it appears like an inland sea, and has several large islands of rich land ; one of which the present generation of Creek Indians fabulously represent as the most blissful spot on earth.

Chief Towns. Augusta is situated on the southwest bank of Savannah river, which is here about 500 yards wide, about 144 miles from the sea, and 127 northwest of Savannah.

Savannah, the former capital of Georgia, stands on a high sandy bluff, on the south side of the river of the same name. The town is regularly built in the form of a parallelogram.

Sunbury is a small sea port town, 40 miles southward of Savannah, and has a safe and very convenient harbour.

Brunswick, in Glynn county, is situated at the mouth of Turtle river, at which place this river empties into St. Simon's Sound. Brunswick has a safe and capacious harbour ; and the bar, at the entrance into it, has water deep enough for the largest vessels.

Frederica, on the island of St. Simon, is the first town that was built in Georgia.

Washington, the chief town in the county of Wilkes, is situated about 50 miles northwest of Augusta.

The town of Louisville, which is designed as the future seat of government in this state, has been laid out and built on the bank of Ogechee river, about 70 miles from its mouth.

There is a great number of smaller towns in the eastern part of this state, viz. St. Patrick's, Ebenezer, Waynesboro', Galphinton, Greensburg, Columbia, Petersburg, New Savannah, New Gottingen, Elberton, Abercorn, Hardwicke, Argyle, Darien, Frederica, Coleraine, St. Mary's, &c.

A part of this state has, by an Act of Congress, been formed into a separate government, bounded west by the Mississippi, east, by the Chatahoochie river, south by the 31st degree of north latitude, and north by a parallel line, extending from the mouth of the Yazou river, to the Chatahoochie, and called "The Mississippi government"—The chief settlement is at the Natchez, on the Mississippi, where there is a garrison.

Soil, Productions, &c. The soil and its fertility are various, according to situation and different improvements. The islands on the sea-board, in their natural state, are covered with a plentiful growth of pine, oak, hickory, live oak, (an uncommonly hard and very valuable wood) and some red cedar. The soil is a mixture of sand and black mould, making what is commonly called a grey soil.

The soil of the main land, adjoining the marshes and creeks, is nearly of the same quality with that of the islands.

Most of the tropical fruits would flourish in this state with proper attention. The rice plant has been transplanted; and also the tea plant, of which such immense quantities are consumed in the United States, was introduced into Georgia, by Mr. Samuel Bowen, about the year 1770, from India. The seed was disseminated, and the plant now grows without cultivation, in most of the fenced lots in Savannah.

From many considerations, we may perhaps venture to predict, that the southwestern part of the state, and the parts of East and West Florida, which lie adjoining, will, in some future time, become the vineyard of America.

Commerce, Manufactures and Agriculture. The chief

articles of export are, rice, tobacco, indigo, sago, lumber of various kinds, naval stores, leather, deer skins, snake root, myrtle and bees wax, corn and live stock.

Georgia exported in 1799 to the amount of 1,396,759 dollars.

Religion. The inhabitants of this state, who profess the Christian Religion, are of the Presbyterian, Episcopalian, Baptist and Methodist denominations.

Constitution. The present constitution of this state is nearly upon the plan of the constitution of the United States.

State of Literature. A college is instituted in Louisville. There is also provision made for the institution of an academy, in each county in the state.

Indians. The Muskogee or Creek Indians inhabit the middle part of this state, and are the most numerous tribe of Indians of any within the limits of the United States. They are a well made, expert, hardy, sagacious, politic people, extremely jealous of their rights, and averse to parting with their lands. They have abundance of tame cattle and swine, turkies, ducks, and other poultry; they cultivate tobacco, rice, Indian corn, potatoes, beans, peas, cabbages, melons, and have plenty of peaches, plums, grapes, strawberries, and other fruits. They are faithful friends, but inveterate enemies; hospitable to strangers, and honest and fair in all their dealings. No nation has a more contemptible opinion of the white men's faith in general, than these people; yet they place great confidence in the United States, and wish to agree with them upon a permanent boundary, over which the southern states shall not trespass. They are settled in a hilly, but not mountainous country. The soil is fruitful in a high degree, and well watered, abounding in creeks and rivulets, from whence they are called the *Creek Indians*.

MISSISSIPPI TERRITORY.

SITUATION AND EXTENT.

Miles.

Length 384 } Between { 31° and $32^{\circ}.23'$ N. lat.
 Breadth 97 } { $9^{\circ}.52'$ and $16^{\circ}.20'$ W. long.

Boundaries. Bounded north, by a line running due east from the mouth of the Yazou River, at its junction with the Mississippi, to the Chatahoocha or Appalachicola River; east, by this last mentioned River; south, by the thirty-first degree of North Latitude, (which is the boundary between the United States and West Florida;) and West, by the River Mississippi, which separates it from Louisiana.

Rivers. This territory is well watered by a number of small rivers and their branches, and several large streams, which mostly run through its whole extent, viz.

Black or Little Yazou empties into the Mississippi, about fifty miles below the Walnut Hills, near the south side of the Great Yazou.

Stony Creek or Bia Piere, and Cole's Creek, empty into the Mississippi, the former ten miles below Black River, and the latter twenty-five miles above Natchez.

Homachitta and Buffaloe, near Loftus' heights, are the most southern waters in this territory that empty into the Mississippi.

Amite rises in about the 32d degree of North Latitude, and pursuing a southerly course, empties into Lake Pontchartrain, being a part of what formerly was called Iberville.

Pearl extends through this whole territory, from north to south, and discharges itself near the entrance of Lake Pontchartrain.

Pascagoola has its source near the northern parts of this territory, and empties into the Bay or Gulf of Mexico.

Mobile, or Tombeckbe, is a very considerable river, whose source is about the 35th degree of North latitude. It abounds with numerous branches, watering fine intervals of land, where the Chickasaw Indians have many towns. In this territory it receives White River on the west: near the head waters of which are the Choctaw Indian towns; about sixty-five miles from the boundary line up the Tombeckbe, are Walker's shoals, the head of tide water.

Alibama, or Tallapoosa, is a considerable river, and unites with Mobile about ten miles north of the line, and receives the waters of the Abacoocha or Cahawba, whose sources interlock with the waters of Tennessee.

Escambia and Coeneuh or Pensacola Rivers, which unite in West Florida, empty into the Bay of Pensacola.

Chatahoocha or Appalachicola (the western boundary of this territory) takes its rise at the foot of the great range of mountains in the northeast parts of Georgia.

Face of the Country, Soil and Productions. This whole territory is low and flat, interspersed with rising grounds at some distance from the rivers, which are generally bordered with swamps and cane grounds. The soil is very sandy. The marshes render the climate unhealthy; fevers are frequent during the months of August, September and October, but the inhabitants do not consider them contagious. Intermittents are not uncommon. The chief productions are cotton, rice, Indian corn and indigo: these yield in great abundance and of a good quality. It has been known that the crop of a planter, in one season, has been sold for 20,000 dollars. They live in a style of elegance, not very common in such new countries.

Natchez, the seat of government, is advantageously
